

FFA members presenting plaque to Agway in recognition of 25 years of continued support included: (from left to right) David Galley, Garrattsville, N.Y., America's Star Farmer at last year's FFA National Convention in Kansas City; Bruce Erath, Grahamsville, N.Y., National FFA

vice president for the Atlantic Region; Ronald N. Goddard, executive vice president and general manager of Agway; Dwight O. Seegmiller, Decorah, Iowa, National FFA president, and Wayne Fletcher, Lisbon, N.Y., president of the New York FFA.

FFA Cites Agway for 25 Years of Foundation Sponsorship

Two national officers of the Future Farmers of America travelled to Syracuse, N.Y., recently to honor Agway for its support of the organization during the past 25 years. They were accompanied by the national FFA Star Farmer and the New York State FFA president on the trip to the headquarters of the 110,000-member cooperative.

Dwight O. Seegmiller, a 20-year-old dairy farmer from Decorah, Iowa, who is president of the 445,000-member organization of young farmers, presented a plaque of appreciation from the national FFA to Agway for its continuing support of the organization. Also presenting a plaque was Bruce Erath, 21, of Grahamsville, N.Y., national FFA vice-president for the Atlantic Region, who presented the silver anniversary award, marking Agway's 25th year of sponsorship of the FFA Foundation which finances the organization's activities.

Accepting on behalf of the farm supply and marketing cooperative which serves in 12 northeastern states, Ronald N. Goddard, executive vice-president, promised that such support, both financial and moral, would be continued in the future.

"We look upon our contribution to FFA as an investment in present and future leadership in the most important business in our nation," Goddard declared, noting that three out of every 10 working people in the United States are employed directly in

agriculture production, or a related field such as marketing.

Goddard noted that Agway and its members in 12 northeastern states support many youth organizations such as 4-H, Junior Achievement, the Boy Scouts and Girl Scouts, and others, "But," he declared, "Number one with us is the Future Farmers of America because with them lies the future of America's farmers."

Accompanying Seegmiller and Erath were David Galley of Garrattsville, N. Y., chosen America's Star Farmer at last year's FFA national convention in Kansas City; and Wayne Fletcher of Lisbon, N. Y., president of the New York FFA.

During the day, spent as Agway guests, the youths toured the Agway Research Farm near Fabius, N. Y., and the Agway Distribution Center at Geneva.

WORM EGGS COST YOU MONEY

Large Roundworm Damage

Damage includes upset digestion, labored breathing, ulcers, poor use of nutrients, and frequently blocked bile duct. Damaged liver, hemorrhagic lungs, constant coughing, and pneumonia also occur, making them vulnerable to disease organisms. Adult worms feed on nutrients in the intestines.

Nodular Worm Damage

As early as 20 hours after being swallowed, infective larvae enter the intestine walls. Nodules then form around the larvae and weakness, emaciation, diarrhea, unthriftiness, and stunting may result.

Whipworm Damage

Unthriftiness, weakness, emaciation, and diarrhea may result. They invade delicate intestinal lining, causing tissue destruction, edema, and hemorrhaging of the intestinal lining. Damaged tissue is susceptible to secondary infections.

For control of costly worm losses, the pork producer can choose from two programs. Continuous in-feed control during times when worm damage is most critical, or purging.

Since worms can be in all stages of development in a hog at all times, purge-type wormers that get only the mature worms fall short of effective control. Purge worming helps remove adult worms, but the immature worms that remain in the hog can mature and be a source of continuous reinfection.

A continuous in-feed worm control program available with Hygromix® can give effective worm control without production set-backs. Hygromix® shuts off egg producing ability of female worms, and reduces the adult worm population. Continued use of Hygromix® works to reduce the worm infection on the premises.

Gehman's Pig Grower containing Hygromix® can increase your swine feeding profits. Discontinue feeding Hygromix® 48 hours before slaughter. For more information contact...
