1974 Feed Grain Program Announced

The 1974 feed grain program provides producers with the opportunity to expand production, Secretary of Agriculture Earl L. Butz said in announcing program details.

There will be no set-aside requirement and no restriction on planting for the 1974 crop program and there will be no conserving base requirement for

the 1974 through 1977 crop years, the duration of the Agriculture and Consumer Protection Act of 1973. Likewise the provision which gives the Secretary discretionary authority to limit feed grain and wheat to a percentage of allotments and upland cotton planted in excess of the base allotment will not be implemented during the period 1974

through 1977.

Barley will be included in the feed grain program for the duration of the act.

The new legislation provides for establishing allotments for feed grains in the same fashion as for wheat. The allotment for 1974 is set at 89.0 million acres. The allotment for the feed grains is approximately 68 percent of the base acreage used in former feed grain programs. However, any payments will be paid on the full allotment; whereas, previously, payments were based on only 50 percent of the feed grain base. The feed grain allotment for 1974 does not represent a limit on acreage, but is computed only for the purpose of distributing payments to producers should such payments be required.

This allotment represents the number of acres, harvested for grain, of corn, grain sorghum, and barley based on the estimated national average yield, which would result in production equal to estimated domestic and export disappearance in the 1974-75 marketing year.

Should the average price received by farmers for corn, sorghum or barley be below the statutory target price for the first five months of the marketing year the difference between the target price and the average price would be paid to eligible producers after the five months period and there will be no preliminary payments. A producer would be paid on an amount of bushels determined by multiplying the farm allotment times the projected yield established for the farm. The projected yield represents the potential production for the farm as determined by the Agricultural Stabilization and Conservation Service (ASCS) county committee.

Target prices for 1974 are \$1.38 per bushel for corn, \$1.31 per bushel for grain sorghum (\$2.34 per cwt.) and \$1.13 per bushel for barley. There are no target prices for oats and rye.

Loan rates for 1974 are based on a national average of \$1.10 per bushel for corn, \$1.05 per bushel (\$1.88 per hundredweight) for grain sorghum, \$0.90 per bushel for barley, \$0.54 per bushel for oats and \$0.89 per bushel for rye.

The total amount of payments a person may receive under one or more of the 1974 feed grain, wheat and upland cotton programs may not exceed \$20,000.

Producers may substitute any non-conserving crop or any conserving crop used for hay or for grazing in order to preserve their feed grain allotments and to make them eligible for any payments under the target price feature. Crops for which a marketing quota is in effect are excluded.

Soybean Loan Level - The soybean loan level for the 1974 crop will be \$2.25 per bushel - unchanged from the previous year.

Jaycees Festival

The Elizabethtown Jaycees Annual Festival will be held September 19 through 22 at the Boro Community Park (South Mount Joy Street). Activities will begin nightly at 6 p.m., and Saturday at 1 p.m.

Among features at this years festival will be rides for children and adults, refreshments, and skill games. A fireworks display will climax the festival beginning at 10:30 Saturday night.
