**School Milk Consumption
To Increase 11 Percent**

Assistant Secretary of Agriculture Clayton Yeutter estimated today that a total of more than 5.5 billion half-pints of milk will be served to children at school this year through the Federal-State child nutrition programs.

He predicted an increase of some 11 percent in the amount of milk that will be served to the children who take part in the National School Lunch Program and the Special Breakfast Program.

"These Federal-State child nutrition programs," Assistant Secretary Yeutter said, "provide the means to make milk available at school to all of America's 51 million school children, in the school year now getting under way. If children do not have milk service in the school they attend," he pointed out, "it is because local authorities have not chosen to utilize the programs available to them."

The Assistant Secretary gave this outline of the child nutrition programs in operation in schools as the new school year gets under way:

— More than 43 million children are this year attending schools

which make the National School Lunch Program available to their children. A serving of a half-pint of milk must be included in every one of the lunches that is served under this Program. In addition, each of the breakfasts served under the School Breakfast Program — in operation in some 9,000 schools — must also include a half-pint of milk.

— Another three million children attend schools which provide meal service, including milk, which is not Federally subsidized. These schools are eligible to participate in the National School Lunch Program, but choose not to do so. USDA, the States, and other cooperators are encouraging these schools to participate in the National School Lunch Program.

— Five million children are attending schools which do not as yet make any meal service available to their children. The Special Milk Program is available to all of these schools which do not yet provide a food

service to attending children. Under the Special Milk Program, a reimbursement of three cents a half-pint is paid to participating schools for milk purchased for service to children, and the schools use these subsidy payments to reduce the price at which the milk is sold to the children. Again, USDA, the States, and other cooperators are making every effort to get the National School Lunch Program into these schools, so that complete meal including milk may be served to the children who attend them. But the Special Milk Program will make milk available to the children, until such time as the schools join the National School Lunch Program and make full meal service (including milk) available to the children.

Child nutrition programs are administered cooperatively by the Food and Nutrition Service of the U. S. Department of Agriculture, by State educational agencies, and by local school authorities.

**New Label Approval for
Poultry Products Proposed**

The U. S. Department of Agriculture (USDA) proposed new regulations detailing the step-by-step procedure for granting approval of labels, containers, formulas, and methods of preparing poultry products.

The federal poultry inspection program requires advance approval by USDA for labels, containers, formulas, and preparation methods for poultry products processed under federal inspection. According to officials of USDA's Animal and Plant Health Inspection Service (APHIS), the proposed changes are aimed at speeding up the approval process.

The proposed regulations would allow manufacturers to submit labels for review to either the central APHIS label approval office or the APHIS inspector assigned to their plant. Inspectors would review labels submitted to them and have authority to grant approval for certain necessary changes on previously approved labels.

Other proposed requirements

include processor submission of a sketch for each proposed label to APHIS before printing—so that it can be checked for accuracy and completeness—and processor certification to APHIS that containers comply with Food and Drug Administration regulations. A proposed new record-keeping requirement would increase USDA control over reproduction of the official inspection mark by label and branding device manufacturers

Comments on the proposal should be sent in duplicate by November 30 to the USDA Hearing Clerk, Washington, D. C. 20250. Anyone wishing to present his comments orally should contact the Labels and Packaging Staff, APHIS, USDA, Washington, D. C. 20250, to arrange for presentation of his comments before the deadline. Written comments and records of those presented orally will be available for public review in the hearing clerk's office

AGWAY

AQUACOVE® One-Piece

fiberglass reinforced plastic
TUB/SHOWER UNIT
Beautifully modern, easy-to-clean

Lovely to look at, fiber glass combination tub and showers warm and pleasant to bathe in. Walls as smooth as glass are a gem to clean and resist chipping, crazing and marring. Big—59" x 35" x 73 1/4". Only weighs 113 pounds. Righthand and lefthand models. SEAMLESS • EASY TO CLEAN • MAINTENANCE FREE

HESSTON

StakHand® 10

The efficient way to handle hay
in 1- to 1 1/4-ton
compressed
Hesston HayStaks!

JUST ARRIVED
SEE IT ON DISPLAY

Now, you can have a one man haying system and put up 4 to 6 tons of hay an hour in compressed stacks that weigh 1 to 1 1/4 tons. The StakHand 10 picks up the hay from the windrow, packs it into distinctive, weather-resistant Hesston HayStaks that develop a natural, protective thatch and unloads the stack in the field, at the roadside, or wherever you may wish to feed or store it. Come in and let us show you the economy of a Hesston StakHand 10 that lets you have a one man haying system. The 60" wide Flail pickup also picks up and stacks corn fodder.
