

4-H Week International Celebration

Lancaster County's more than 2,900 4-H members are having a celebration October 7th to 13th. They will be joining over five and one-half million other 4-H'ers throughout the nation and in 85 countries around the globe to observe National 4-H Week. "4-H Gets It All Together" is the theme of the 1973 National 4-H

Week and in many ways 4-H has "gotten it together" by involving rural and urban boys and girls, of all racial, economic and social backgrounds, from ages eight through 19 in educational programs. 4-H members "learn by doing". They get involved in club projects from clothing construction to

veterinary science, livestock, and dairy to babysitting and baking. There are over 160 projects from which 4-H'ers choose.

4-H members learn more than skills. They learn to be better citizens and leaders through educational programs sponsored by the Cooperative Extension Service and Penn State University. In 1973, Lancaster County 4-H'ers have participated in State Leadership Congress, 4-H State Days, judging events, Public Speaking and demonstration contests, plus interstate

exchange trips with 4-H'ers from Michigan.

Each 4-H member pledges his Head, Heart, Health and Hands for a better club, community, country and world. If you are interested in knowing more about how "4-H Gets It All Together" contact the Lancaster County Cooperative Extension Service, Room 1, Farm and Home Center, 1383 Arcadia Road, Lancaster.

In The Can

Canned fish, it is estimated, accounts for about 40 percent of the total fish consumption, with tuna and salmon the most popular.

FOR EXTRA PROFITS!

©American Cyanamid Company 1973

Here's a sure way to build extra profits in your hog operation. Knock out two major causes of high production costs . . . worms and disease-causing germs.

Worm hogs with TRAMISOL in feed!

TRAMISOL levamisole is all the wormer you will ever need. It knocks out all major species of stomach, intestinal and lungworms. No other wormer hits all three types.

Keep hogs healthy with feeds containing AUREO S-P 250.

AUREO S-P 250 aids in the prevention of bacterial enteritis (scours) and cervical abscesses. Helps maintain weight gains in pigs with atrophic rhinitis. Improve weight gains and feed efficiency in pigs up to 75 pounds.

This season use the WORM'N GERM Program for bigger hog profits. See your feed supplier for details on this profit-making program.

One-Man Farm Can Be Efficient

When fully mechanized, the one-man farm can be as efficient as any when it reaches an "optimum" size in various areas across the country, according to a study by U. S. Department of Agriculture (USDA) economists. Thereafter, enlarging the farm does not reduce unit costs of production, the study found.

However, the most efficient one-man farm is usually larger, needs more capital, and requires more managerial talent than is found on most one-man farms today in the United States, says the report from USDA's Economic Research Service (ERS). Expansion to at least the optimum one-man size makes for greater economy of operation, and better use of the operator's time and equipment.

Farms larger than the one-man size may have some minor purchasing and selling advantages, but the main incentive is to boost output for a larger total income, according to the report.

The optimum one-man farm, for study purposes, was considered to have the maximum acreage in crops that a man and his machines could plant, cultivate, and harvest seasonally or annually. For example, if a man can harvest 500 acres, cultivate 400, but only plant 300 acres of a crop, the effective optimum is 300 acres.

The study identified several technically optimum one-man units: California cotton, 400 acres; Delta cotton-soybeans, 600 acres; Indiana corn-soybeans, 800 acres; Kansas wheat-grain sorghum, 1,950 acres; Northwest cattle, 5,900 acres.

Specialized crop farms, even those that are technically optimum, may not employ the operator full time, ERS states. In such instances, a combination of farm and nonfarm activities might be considered.

A copy of "The One-Man Farm," ERS-519, is available free on postcard (please include zipcode) or telephone (447-7255) request from the Division of Information, Economic Research Service, U. S. Department of Agriculture, Washington, D. C. 20250.

Review Homeowners Insurance

Is your home adequately insured? Chances are it's not. A survey by an insurance company reveals that over half of all single family homeowners don't carry enough insurance to protect their property fully.

Inflation is a common cause of inadequate coverage. A house fully insured ten years ago may now be insured for only half its value — unless the amount of insurance has been increased.

The value of your home also may have increased if you've made home improvements. When you add a room, remodel or even panel an existing room, it's wise to increase your insurance policy. Then too, replacement costs have increased with changes in supply and rising labor prices.

In any case, it's recommended that insurance coverage equal the market value of your home minus the value of the lot and the foundation. A good rule of thumb is to have coverage for no less than 80 percent of the replacement cost. Many insurance companies offer homeowner's policies with a built-in inflation guard provision that increases coverage at regular intervals.

In England, grain is called corn and corn is called maize.
