# **Keystone Sheep Show To Be Biggest Ever**

p.m., Sunday evening, between

performance classes of the

Quarter Horse Show in the main

arena. The Hampshire breeders

will also conduct a ladies lead

class of their own, Monday af-

ternoon, pausing between the

end of the ram classes and before

The object of both the Ladies

Lead Classes is the same -- to

present a class of yearling ewes

the start of the ewe classes.

The sheep classes at the Keystone International Livestock Exposition have always been the biggest in sheer numbers. When the 17th renewal of the Keystone International opens for its sixday run on Nov. 8, 1973, in the Farm Show, they will also show the biggest increase in numbers over last year's entries.

In addition to sheep and lambs, Keystone International judging also covers seven breeds of swine, five breeds of beef cattle and three breeds of saddle horses.

There is a three-fold reason for both the size of the sheep show and its apparent increasing popularity. First, a sheep rancher can humanely and with greater facility pack more sheep into a truck than can breeders of the other three livestock species. Secondly, with the rise of beef prices in recent years, the consuming public appears to have rediscovered its taste for lamb.

The third, and perhaps biggest reason for this year's spurt in sheep entries is the decision by the American Hampshire Sheep Association to hold its 1973 Eastern Regional Show at the Keystone International Livestock Exposition. The Hampshire breed ranked 4th in the sheep department with respect to the number of head shown at the 1972 exposition. With Eastern Regional status they should easily catapault into first place among the 11 breeds of sheep.

The special Hampshire activities will occupy all of Monday afternoon and evening, Nov. 12, beginning with the breeding classes at 12:30 p.m. and continuing with the yearling bred ewe sale at 4:30 p.m. and then followed by the annual banquet and meeting of the association at the Ramada Inn, Mechanicsburg. Premiums for the Hampshire Eastern Regional have been scaled upwards from 40 to 70 percent.

The popular Ladies Lead Class is back again this year, in spades. The regular feature will be held as usual, at approximately 8

## **Hog Cholera Committee Urges Vigilance**

November.

While noting substantial progress, the Secretary of Agriculture's National Hog Cholera Eradication Advisory Committee called for continual vigilance to finally wipe out the costly hog cholera disease.

At its semi-annual meeting held in St. Louis in conjunction with the U.S. Animal Health Association conventions, the committee observed that hundreds of millions of dollars already have been saved in terms of greatly reduced swine losses and the elimination of vaccine costs to producers.

To prevent a resurgence of the disease such as occurred in 1972, however, the committee called for adoption of an identification system that would allow tracing of diseased swine back to farms of origin. In the past, when outbreaks occurred in marketing channels, infection often could not be traced to its source. Such undetected pockets of infection then could cause additional outbreaks.

Currently, only four states - -Indiana, New Jersey, North Carolina and Texas - - are not considered free of hog Cholera. The committee also pointed out that only two swine herds have been infected with hog cholera in the last six months.

The committee urged, however, that federal and state governments step up their surveillance in high risk areasespecially those along the U.S -Mexico border. One of the two recent hog cholera outbreaks occurred in southern Texas, along that border.

in a most attractive manner, led

on a halter by an appropriately

attired attractive young lady

between the ages of 16 and 22. The

Sunday evening event is open to

any breed of sheep while Monday

afternoon will see only Hamp-

snires in the ring. The winner of

the Hampshire event will be

eligible to compete in a national

event in Chicago later in

In addition, the committee cautioned the swine industry to beware of those persons who attempt to market "scrub" hogs-known in the trade as "culls" or "junk" hogs. These hogs are more likely to be carriers of diseases, and pose serious threats to the health of other animals if allowed to be diverted from slaughter plants to farms or feedlots for additional feeding.

Hog cholera is a highly infectious virus disease usually fatal to swine. It affects no other animals or humans. The national cooperative program to eradicate hog cholera in the United States began in late 1962 with the backing of industry.

Dr. Francis J. Mulhern, administrator of USDA's Animal and Plant Health Inspection Service, is chairman of the 12member advisory committee on hog cholera eradication. Committee members include producers, marketing interests, private veterinarians, state and federal veterianary officials, agricultural and commodity organizations, and representatives of the scientific and academic communities.

EQUIPMENT

Waiver of Finance on all Hay & Forage Equip. until Next Season,

Detergent, filter pads and brushes at similar savings. Minimum quantities may be in effect on certain items. Shipments made daily via U.P.S. Kesco Dairy Equipment offers direct sales discounts on transfer systems, vacuum pumps, pipeline milkers, P.T.O. alternators, and hydraulic powered self propelled feed carts. Allow us to quote you. Example: pipeline pricing would be as low as \$1,100.00 for milkroom equipment including wash vat plus \$40.00 per cow for 2" milk line plus vacuum if needed and units. A typical 60 cow barn with 2" SS milk line as low as \$3,500.00.
