

# AGWAY

## Agway can provide everything you need to produce milk of the highest quality — except the cows

Modern buildings. Mechanized feeding. Agway can provide these, of course. But you also want to guarantee that your milk will always meet the highest standards of flavor and quality.

What counts here is a modern milking setup, plus automated cleaning and sanitizing of every piece of equipment that comes in contact with the milk. Agway calls this the Guardian Milk Program. Here's what's included:

1. A Sta-Rite pipeline milking system to fit whatever cow handling system you use, regardless of size. Your choice of glass or stainless steel in 1½" or 2" piping. This is a complete system engineered to your present needs and with built-in provision for expansion.
2. A complete line of bactericides and sanitizers to remove totally both alkaline and acid deposits in

all kinds of systems, before they can support bacterial colonies. Including Liquid Bactericide and Teat Dip, Liquid Automatic Cleanser, Acid Cleanser and the information you need to use them efficiently.

3. A centralized control station for automated cleansing and sanitizing entire milk handling systems. This can save up to 45 eight-hour man-days per year.

Because water supply plays an important role in the efficiency of cleansers and sanitizers, Agway invites you to have your water tested for hardness and impurities FREE, right on the farm. You'll get a FREE lab test too (Agway provides a water sample bottle). By interpreting the lab test, Agway can recommend the correct amounts of chemicals to use in your water for best cleansing and sanitizing results.

Just contact your local Agway. Ask for the entire Guardian Milk Story.
