

# AMERICA STILL BEAUTIFUL

## NATURAL BEAUTIES

About every 66 minutes, "Old Faithful", the most famous geyser in Yellowstone Park, does its thing. Well deserving of its name, it's the most regular geyser in the world, regularly visited by spurts of admiring tourists!

Another site many tourists love to see is a Holiday Inn. There's one near all these attractions and over 1,600 more throughout the world. They all have swimming pools, free parking, free reservations and many other features for a beautiful vacation!

On the New York-Canada border, the great St. Lawrence River pours itself over Niagara Falls, and thousands of honeymooners and other tourists fall in love with the beautiful sight!

The world's largest gorge and one of its most beautiful natural phenomena is the Grand Canyon on the Colorado River in Arizona. It's 217 miles long and up to 7,000 feet deep!

# FOCUS on FUN

THERE ARE SMILES...

These warm days, even a sour "puss" starts grinning like a Cheshire cat. The smile season is here. And if those smiles are to be captured by a camera, a few simple tips can help.

1. Keep your subjects busy. If they're absorbed in an activity, they'll ignore your camera and the resulting snapshots will be warm and natural-looking. Children can be diverted with an inter-

esting prop: a toy, food, anything that ticks or moves.

2. Remember that you want your subjects to feel at ease — most people are more relaxed when sitting than standing.

3. Move in close. Close-up photos of people have impact because they focus on detail and eliminate distracting surroundings. Check your camera manual to see how close you can get.

4. Keep your camera at hand. So many photo opportunities are missed because the camera has been put away.

5. There are two ways to avoid "squinting" photos. Either move your subject into the shade (watch that the background isn't sunlit — this can fool an automatic camera) or use fill-in flash (have your subject turn his back to the sun; use a flash to light the shadow on his face).

It's up to you to catch your subjects' smiles. But a photography session made more pleasant by these pointers should provoke many more smiles you'll want to save.

## GOOD CALF GROWTH PAYS OFF

### WHEN HEIFERS START MILKING

Good solid calf growth can be put on fast at low cost. And it can pay off in early freshening and good production right from the first lactation.

Many dairy men have proved to themselves that the Purina Calf Growing Program can help develop heifers that freshen between 22 and 24 months and repay their growing costs in the early months of lactation.

Here's the Purina Calf Growing Program:

First 3 days—Colostrum

4 days thru 4 or 5 weeks—Purina Nursing Chow®—a milk-base milk replacer fortified with vitamins and minerals.

4 days thru 2 months—Purina Calf Startena®—a palatable calf ration with a research-proved energy-protein balance for good calf growth.

3 thru 6 months—Purina Calf Growena®—a 16% ration that provides a high palatable level of protein that fast growth demands. Calf Growena is fortified with vitamins and minerals.

At end of 2 months—Good quality hay free-choice.

Prove to yourself that it can pay to grow calves on the Purina program. Stop in and talk to us—at the sign of the familiar red and white Checkerboard.
