Heifers To Be Dedicated Sunday

Some sixty heifers will be dedicated during a special service at the John Cope Farm, Landisville Road, Sunday evening at 7:30 p.m. The heifers are a portion of 90 from this area that will be leaving for Cameroon and Tanzania from the

Harrisburg Airport on August 5th.

The animals are a part of a good will project sponsored by Manheim Church of the Brethren along with other congregations across the county.

It is hoped the bred heifers will produce calves for the people in the countries where they will be sent.

Committee chairman for the project in this area has been Clarence Keener, Sr., RD1, Manheim.

Veterinarian Assistant. Sandy is very active in 4-H, Grange and her church. School sports which she is active include, hockey, basketball, and softball.

Sharon Troutman is the daughter of Mr. and Mrs. Richard Troutman, Richland, Pa. Sharon is sixteen years of age. She would like to attend Allentown school of nursing to become a registered nurse. She is active in 4-H and

grange. She is also a member of the National Honor Society.

Susan Seidel is the daughter of Mr. and Mrs. Raymond Seidel, Richland, Pa. She is seventeen years of age. Susan is employed as a dental assistant. She is active in 4-H, church organizations, and many Holstein organizations. She is also a member of the Berks County Dairy Judging team.

ATTENTION DAIRYMEN:

Did someone say you should put in a 2 inch or 3 inch milk line? Yes, because the conventional pipe lines carry milk, and the milking vacuum in same pipe. Your galvanized pipe only carried pulsation vacuum (the vacuum between shell and inflation.)

Oh, a larger milker line may help your milker, but if a slug of milk goes down a 2" line your vacuum drops, just like in a 1 1/2" line, so before you scrap that old 1 1/2" line, why not use that old 1 1/2" line to transfer milk only, and install another 1 1/2" stainless steel line to carry your milking vacuum, with no milk or liquid in this line you have free moving air, no drop in vacuum. Then use the new Zero pipeline unit with above, you have the best milker you can buy, no air injection needed, to slug milk up the hose.

Did you ever stop and think? Would you like that same air sucked through your drinking water.

Zero - PIONEER OF FARM BULK MILK COOLERS

Inside Chuck Pot-Roast

An inside chuck pot-roast is the inside chuck muscle (eye) of the blade portion of the chuck, which lies directly next to the rib section. A boneless cut, it is made by removing the blade bones, featherbones, back bone and rib bones which surround it. Fat cover, if any, is thin. It often is tied into a roll. Since chuck is less tender than the beef loin or rib, this cut is most often prepared as a pot-roast. It is braised slowly in a small amount of liquid, covered, on top of the range or in the oven until tender, 3 to 4 hours. A variety of seasonings and braising liquids can be used. If the beef is of high quality, this cut can be prepared as a roast—cooked in an open roasting pan without the addition of liquid in a slow oven (325°F).
