Livestock Seminars

The first of a series of nationwide meetings to explain export requirements for shipping cattle and sheep, as well as meat, into Canada, will be held here Aug. 14, the U. S. Department of Agriculture (USDA) announced today.

The meeting will convene at 10 a.m. on Wednesday Aug. 14 in Room 218-A of USDA's Administration Building, and is open to the public.

Follow-up public meetings subsequently will be held throughout major livestock producing and feeding areas, with schedules for these meetings being announced locally. The meetings will be conducted by USDA and Extension Service personnel.

USDA officials explained that since April, U. S. feeder and slaughter cattle and sheep, and the meat from such livestock, have been banned from Canada because Canadian law prohibits the use of diethylstilbestrol (DES) as a growth stimulant.

Under the terms of an agreement announced recently by Canadian officials to reopen their borders, a four-step certification process must be followed to qualify feeder and slaughter cattle and sheep, plus beef, veal, lamb and mutton meat for importation into Canada must certify that he has received instructions on the Canadian requirements, that he understands those requirements, and that he will abide by them.

Prior to shipment, the owner must certify that he has had possession of his

animals for at least 120 days, that DES is not used as a growth promotant on his premises, and that to the best of his knowledge the animals shipped have never received DES.

In addition, the agreement calls for co-certification by a veterinarian, accredited by USDA, that DES is not being used on the private producer's or feeder's premises.

Falsification of these certifications is punishable under Federal law by a fine up to \$10,000 and -or five years' imprisonment.

These certification papers along with the identification of the animals must be presented to a veterinarian of USDA's Animal and Plant Health Inspection 'Service (APHIS) before the USDA export inspection certificate is issued.

APHIS veterinarian will check to make sure the DES-free certifications are in order before clearing the shipment

For animals going to slaughter in the U. S., after which the meat will be exported to Canada, proper certifications must accompany the shipments to the packing plant. At the plant, papers will be checked by the APHIS Meat Inspection Veterinarian-in-Charge before the required meat export certification is signed by the inspector.

The Canadian ban on U. S. feeder and slaughter livestock and meat was imposed on April 9, 1974 following a U. S. Court of Appeals decision in January 1974 which overturned a similar ban on the use of DES in the U. S. imposed by the Food and Drug Ad-

ministration (FDA).

USDA officials noted that U. S. law currently permits the use of DES in cattle and sheep for promoting their growth, so long as the DES is withdrawn from the animal at least 14 days in advance of slaughter to eliminate DES residues in the meat.

Long-grain Or Short-grain?
Long grain rice, with grains four or five times longer than they are wide, is favored by American housewives because the grains will not stick together when cooked. Asians prefer short grained rice, whose moist grains cling when cooked, because it is easier to eat with chopsticks.

**Empet Promoted
At NEBA Office**

Nelvin B. Empet, a Susquehanna County native and son of Mr. and Mrs. Arthur T. Empet of RD1, Kingsley, has been promoted to the position of Sales and Service Director for Northeastern Breeders Association, Tunkhannock, Pa. In his new position he will be in charge of all field services and personnel and will be responsible for conducting the sales and service programs for the Tunkhannock based Cooperative, which provides breeding service on some 10,000 farms in Pennsylvania and New Jersey.

Empet has been Director of Member Relations for Sire Power, Inc. for over two years during which time he worked closely with the Sire

Power member Co-ops of NEBA, Md. ABC and W. Va. ABC developing member service and information programs. He received his B. S. degree in Agricultural Education from the Pennsylvania State University in 1965. Following graduation he served as State Fieldman for the Pennsylvania Holstein Association and prior to joining Sire Power taught Vocational Agriculture at Mountain View High School and worked with the family farm.

He and his wife, Carol, who is an instructor in English and French at the Worthington Scranton Campus of Penn State in Dunmore, will continue to live in the Tunkhannock area.

xxx

According to the Credit News Bureau, the law requires credit bureaus to disclose everything in your file. The Bureau estimates that more than 1,700,000 consumers reviewed their files in 1973.

xxx

Tests by a major tire company show that tires inflated below the levels recommended in car owner's manuals can cost motorists as much as one mile per gallon in gas mileage.
