## 16-Lancaster Farming, Saturday, Sept. 7, 1974

Principal guests at the Simmental Field Day were from left: Don Vaniman, Executive Secretary of the Simmental Association, Dr. Thomas Conrad, president of the Pa. Simmental Association, Gene Folck, Ohio Simmental representative, Ansul Armstrong, president of the New Breeds Industry and Dr. Lowell Wilson, beef specialist at the Pennsvlvania State University.

Contestants were asked to judge several Simmental cows according to

Association, along with Gene nature.

Folck of the Ohio Simmental Association and Ansul Arm- cattlemen across the country Manhattan, Kansas.

ine Simmental Breed of Cattle is relatively new to this country as the first bull was brought to the United States in 1967. In October of 1968 the American Simmental Association was formed in order to promote the breed of cattle and to organize registration and performance record facilities.

Summentals themselves are one of the oldest breed of cattle. They originated in the Simme Valley of Switzerland and spread throughout Europe, Russia, South Africa and the Mid East.

They are rapid growing animals usually producing large calves and weaning calves at high weights. They are milk producing animals as well as beef animals and

declined only 0.8 percent a year from 1970 to 1973, contrasting sharply with 4.8 percent average annual declines in the 1960's according to a U.S. Department of Agriculture report issued today.

Economic

## The U.S. farm population migrating from farms or reclassification of their residence from farm to non farm averaged 113,000 annually. Although the absolute average loss has been steadily declining as the number of potential migrants diminished, this

As they are introduced to strong, president of the New the breed has become more Breeds Industry from and more popular resulting in increased registrations.

The Conrads of Beechdale Farm first got interested in the Simmental Breed about two years ago. Mrs. Conrad explained that they especially liked the cows for their docile nature and felt that they were becoming a popular breed.

Since Simmentals are

weaned over a two year period.

the weight of the calves they had

often used in crossbreeding programs. Conrads have bred Hereford, Guernsey, Angus and Charlois cattle with Simmental semen and presently have 90 animals. Last year at the Allentown

Fair, the Conrads showed the Grand Champion Female Cow and have won other awards also.

Presently there are 39 state associations for Simmental Cattle with approximately 30 members in the Pa. Association.

good qualities in milking and beef production.

In listing the advantages of crossbreeding, Dr. Wilson said that a crossbreeding program can increase fertility by 15 percent, weaning weight by 10 percent, growth by 5 percent and net profit as producers will stay with high as 25 percent. This is purebred breeds," he however, he qualified if the program is a complimentary one in which the good qualities of both breeds crossbreeding for vigor and

compliment each other. "A good program," he explained "depends on the plan you follow, a base for selection of animals, good management and using the

breed best suited for your

interest." ''Although many commented "within the next twenty years many producers will also be

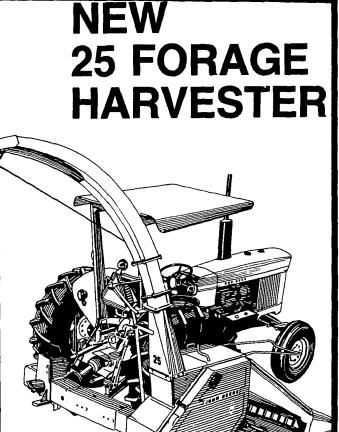

carcass quality."

Others speakers for the afternoon program included Harry Stanbach, president of the Pa. Cattlemen's Association. Stanbach described the bull testing program at Penn State and also encouraged interested cattle producers to join the State Association.

Also present to speak on behalf of the Simmental Breed was Don Vaniman, Executive Secretary of the American Simmental are noted for their docile
