Pequea Presbyterian Church in Salisbury Township will honor its founders with a day of services and fellowship on Oct. 13th.

Rural Church Observes 250th Anniversary

The Pequea Presbyterian Church in Salisbury Township will honor its founders with a day of services and fellowship on Sunday, October 13th.

The Church was established in October 1724 although members of the Presbyterian faith had settled in the area at an earlier date.

Rev. Adam Boyd, the first preacher, also preached throughout a large area of what is now Lancaster County and a part of Chester county. Because of the number of churches he served, he was able to be present at each one every sixth Sunday.

Pequea's log church stood in what is now a part of the Cemetery. A large oak tree which stood near the church remained there until 1971. The log church was removed some time after the first permanent church was built. That church is now a part of the Sunday School wing.

Everyone is invited to attend the October 13th services. Rev. Dr. Wm. Rusch of the Penna. Synod will preach during the 10:30 a.m. service. A period of fellowship and homecoming will follow. Closing vespers are scheduled for 3:15 to 4:00 p.m.

Church relics and antiques will be on display all day.

The Pequea Church is located on Cambridge Road near White Horse in Salisbury Township.

Rev. Stanley H. Burns is pastor.

Over \$184,100 in scholarships will be awarded 265 national winners during the 53rd National 4-H Congress in Chicago, Dec. 1-5. The awards are provided by corporations, businesses and foundations in some 43 different programs.

Automobile Service Tips

ALTERNATOR—IS THE ELECTRICAL SYSTEMS CHIEF SOURCE OF POWER WHILE THE ENGINE IS RUNNING. IT CONVERTS MECHANICAL ENERGY INTO ALTERNATING-CURRENT ELECTRICITY WHICH IS CHANNLED THROUGH DIODES THAT ALTER IT TO DIRECT CURRENT FOR THE ELECTRICAL SYSTEM. DIRT OR DETERIORATION CAUSES HARD STARTING, POWER LOSS AND REDUCED FUEL ECONOMY.

GO Zero Concord FROM TEAT TO TANK!

NEW MODEL 70'S
Zero Concord
TWIN-VACUUM PIPELINE
MILKING SYSTEM
—WITH COW MONITOR

It's a combination of a new, revolutionary pipeline milking machine and the ZERO Completely-Automated Vacuum Bulk Milk Cooler.

The ZERO CONCORD is the only system that provides stable milking vacuum at the teat end—in parlor or stanchion barn—with a low or high, short or long, pipeline—and without injecting air into the milker units to move the milk. Only with stable vacuum and no air injection can you hope to reduce leucocyte counts up to 65%—increase milk production as much as 20%—and prevent off-flavor and rancid milk.

The safe, stable vacuum is made possible by a patented, scientific principle . . . TWIN-VACUUM . . . whereby one vacuum milks the cows, and a different vacuum moves the milk through a separate pipeline into the bulk tank. In addition—thanks to ZERO's patented SPATTER-SPRAY Automatic Washer and new, improved, high-capacity, transparent milker unit—you have built-in, "push-button" visible self-cleaning and sanitizing of the entire system—without disassembling. And there are many other advantages.
