Surprise For Horses: 1st, Steve Allegrati on "Chooka." 2nd, Ray Carmean on "Little Binion."

AGWAY

The STA-RITE Reflex Arm eliminates milking's most important decision...

when to remove the milker.

No cow deserves to be over-milked. It's one of the major contributors to udder stress which can lead to mastitis. Under-milking is just as bad. Milk left in the udder reduces your profits and can lower total production. And there's the important decision; to know precisely when to remove each milker. And that's a tough job because no two cows milk-out exactly alike. There is a new, simple and profitable answer to this perplexing problem. It's the STA-RITE Reflex Arm.

Electronically accurate milker removal. Milk flow is continually monitored by the

STA-RITE Reflex Arm. ①When milk flow stops, special electronic sensors shut off the vacuum. ②The Reflex Arm then gently removes the milker unit from the udder and ③ moves it up, out of the operator's way. Each Reflex Arm is shipped fully assembled, ready for installation on any pipeline system. Horizontal and vertical adjustments are easily made to suit every cow and udder size.

Milk more cows per hour. Turn your back on over-milking problems. End needless steps required to check individual milkers. All you have to do is prepare the udder and attach the milker. The STA-RITE Reflex Arm gives each cow individual attention because she controls the duration of her own milking cycle. Vacuum shut off and milker removal is automatic as soon as her milk flow stops. You'll milk more cows per hour . . . more per operator . . . safely, surely and more profitably. Install STA-RITE Reflex Arms in your milking parlor. You'll discover you don't have to be in several places at once.

We're proud to be part of the solution . . . not part of the problem.
