The AUREOMYCIN SS First-Pound-of-Feed Program

Broiler starting programs utilizing high levels of AUREOMYCIN in feed have been successfully used for years. With today's cost of feed and the market price of live broilers this accepted practice is more profitable than ever.

The AUREOMYCIN SS First-Pound-of-Feed program involves feeding chicks 200 grams of AUREOMYCIN chlorotetracycline per ton (with 1.25% sodium sulfate and 0.8% calcium) in the first pound of feed.

Providing chicks with high antibiotic blood levels with the use of AUREOMYCIN aids in the prevention of snovitis with result in better weights, improved feed conversion and reduced mortality. It can increase your income substantially.

Based on results of large commercial trials involving more than 14 million broilers, weight improvements and feed savings can produce an extra return of \$8.28 per 1,000 birds — with feed costs of 6¢ a pound and broiler prices at 18¢ per pound.

And the cost is low. Less than \$3.00 per 1,000 birds is all it takes to provide potentiated AUREOMYCIN in the first pound of feed. This is about the best investment around today.

Plan now to put your next flock on the AUREOMYCIN SS First-Pound-of-Feed program.
