

# Sutan<sup>®</sup> Selective Herbicide + and atrazine... my "go-fishin' herbicide"

When I get my corn planted, I'm set for a little fishing. Before other farm jobs. With no cultivating or spraying a catch-up herbicide.

That's because I incorporate a tank mix combination of Sutan<sup>®</sup> herbicide and atrazine in the soil when I disc my corn ground for planting. Sutan<sup>+</sup> takes care of the grass weeds. Atrazine gets the broadleaves.

Mixed in the soil, this combination works.

Rain or shine. Sutan<sup>+</sup> and atrazine are right in the soil destroying weeds as they sprout. No waiting for rain as with surface-applied herbicides. It's always dependable!

Sutan<sup>+</sup> is designed to give excellent crop

tolerance on a wide range of soil types under all variations of weather stress and application errors.

Sutan<sup>+</sup> with atrazine has a top reputation for reliable broad-spectrum weed control in corn. No wonder I call it my "go-fishin' herbicide" combination.

Use it on your corn ground, too. Check dosage rates on the product container. Always follow label directions carefully. See your Stauffer supplier for Sutan<sup>+</sup>. Stauffer Chemical Company, Agricultural Chemical Division, Westport, Connecticut 06880.
