DE LAVAL MODEL 200 AUTOMATIC

The Automatic Model 200 Milker, a major development in the dairy industry, is the first milker that is controlled by the cow. When the cow is ready, the machine begins to milk and an indicator light goes on to tell the operator that it is milking. The Model 200 automatically stops milking when the cow is through. The indicator light will then go out telling the operator that the cow is milked out.

Corn-soy: the ideal source of amino acids

Feed the Vigortone corn-soy way. For some time now, universities and top nutritionists have agreed that a corn-soy ration provides the ideal level and balance of amino acids for growing and finishing swine. In fact, one leading nutritionist recently concluded: "There is no single ingredient or group of ingredients that will economically substitute for soybean meal in swine rations." Corn-soy rations, like all swine rations, must be fortified with the proper levels of major minerals, trace minerals, vitamins and other ingredients vital to the health and growth of the pig. This is where Vigortone pre-mixes come in. Vigortone pre-mixes for proper nutrition. Seldom will any feed program out-perform a Vigortone fortified corn-soy ration. The reasons are simple. In addition to providing the proper balance of all 10 essential amino acids, you also assure adequate levels of other nutrients — even when poor quality grain is fed. Unlike commercial programs, the ration is not robbed of proper nutrition when you cut back on protein (amino acids), because your major minerals, trace minerals, vitamins and other ingredients are separate. Visit with your Vigortone Serviceman. If you'd like to learn more about corn-soy rations and how to fortify them, talk to your Vigortone serviceman soon. You'll learn why more pork producers are feeding Vigortone — especially now.
