

Sutan⁺ and atrazine... Selective Herbicide my "go-fishin' herbicide"

When I get my corn planted, I'm set for a little fishing. Before other farm jobs. With no cultivating or spraying a catch-up herbicide.

That's because I incorporate a tank mix combination of Sutan⁺ herbicide and atrazine in the soil when I disc my corn ground for planting. Sutan⁺ takes care of the grass weeds. Atrazine gets the broadleaves.

Mixed in the soil, this combination works. Rain or shine. Sutan⁺ and atrazine are right in the soil destroying weeds as they sprout. No waiting for rain as with surface-applied herbicides. It's always dependable!

Sutan⁺ is designed to give excellent crop

tolerance on a wide range of soil types under all variations of weather stress and application errors.

Sutan⁺ with atrazine has a top reputation for reliable broad-spectrum weed control in corn. No wonder I call it my "go-fishin' herbicide" combination.

Use it on your corn ground, too. Check dosage rates on the product container. Always follow label directions carefully. See your Stauffer supplier for Sutan⁺. Stauffer Chemical Company, Agricultural Chemical Division, Westport, Connecticut 06880.
