We're just part of the team.

Sure, we run short on supply sometimes, just like everyone has been. But we've got a lot more going in the long run than just selling "product."

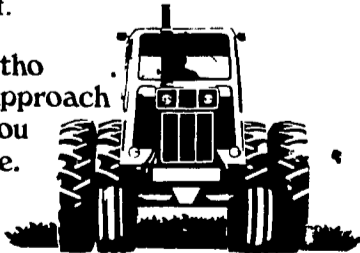

We offer the "Complete Approach" . . . a program backed by the entire Ortho Marketing and Agronomy Team

What does this mean to you, the customer? Help on soil sampling. Sound fertilizer recommendations that get the best use out of the supply available. Equipment and personnel for timely custom application. And detailed record-keeping services on your field locations, nutrient levels, and management history.

Come the harvest, you get the best reward of all a top-quality, high-yield harvest.

Talk to us . . . we're part of a team you can rely on.

The Ortho team approach helps you produce.

promotion group in Minnesota. The funds that stayed in the state were used largely for the expenses of the Cherry Princess promotion. Reiter said that the administrative costs collected by the state for handling the program amounted to about five percent of the total.

After the meeting, H. Peterman Wood, president of the Southeast Grape Industry Association, expressed an interest in the marketing program, but said that there were some major questions that needed to be answered first. The biggest of those, he felt, was whether or not the group would be able to use the money to promote Pennsylvania wines, an alcoholic beverage. Wood operates the Pequea Valley vineyard and winery in Southern Lancaster County.

The growers at the meeting represented a significant portion of the infant wine grape industry in southeast Pennsylvania. Some growers were also present from Maryland.

There are about 1300 acres of wine grapes in the

Commonwealth. Of these, about 1000 acres are in Erie County, and the rest are scattered throughout the southeastern area. Lancaster County has approximately 100 acres of vineyards planted to wine grapes. The great majority of this acreage has been planted only in the past few years, and many of the vines have yet to bear fruit. Grape vines don't ordinarily bear until the third year.

The growers came to Thursday's meeting to learn more about the care of their vines. They heard from Associate Lancaster County Agent Arnold Lueck who discussed weed control and the licensing of pesticide applicators.

Dr Carl Haesler, a Penn State extension pomologist who heads up the North East Research laboratory in Erie County, talked about fertilization, pest control, and trellis management. Haesler also gave pruning demonstrations in the vineyards of Robert Hummer, Manheim, and Raymond Stoner, Lancaster.

Dr. Don Petersen, a Penn State extension plant pathologist, discussed the control of black rot, botrytis and other diseases of the grape plant.
