Tractor Pullers Set To Open '75 Season

Although their tractors didn't roar, spit fire and smoke, or churn dirt, Lancaster County tractor pullers did get their season underway with friendly competition before a crowd of thousands last week at Park City.

The pullers trucked 17 tractors into the Watt & Shand Mall. Giant super stock tractors, souped up garden tractors and

everything in between were on display.

An estimated 25,000 people looked at the machines, and inch V-8 Ford engine

700 of them stayed long enough to cast their votes for the best looking tractor. When the votes were counted, the winner was Elwood Funk's modified Farmall F-30. The tractor was built in 1939, but is now powered with an 1100 cubic-

Route 30 about 12 miles east Irolan of the City. The Buck Track will open its season a week later on Saturday night, May 17. That track is located 12 miles Trojan Seed Company south of Lancaster on Route 272. Buck pulls have also been scheduled for May 24 and May 31. More information about any of these events can be had by calling

er amounts of food for more and more people - is a success story unparalleled in U S history From 100 percent of the original settlers working the

The chronicles of agricultur-

al productivity - fewer and fewer farmers producing great-

land for their own survival to the present total of less than 5 percent of the U.S. population engaged in farming to feed the remainder of the country and a sizable part of the world, it's a story of amazing agricultural statistics

At the time of the Revolution, more than 90 percent of the population of the new

Farming's Productivity

nation was still engaged in larming

By 1820, the percentage of tarmers had dropped to some 83 percent and about 60 man hours of labor were needed to produce an acre of wheat

Gradually the number of Americans in agriculture continued to slip until by 1870 farmers were no longer in a

majority in the U.S. By then, only 47 percent of the countn's population could be classitied in agriculture.

The number of farmers dwindled further and by 1910 only a third of the growing population was in agriculture

With only 21 percent of the population in farming in 1930, total man hours required to produce an acre of wheat fell to just three

In the 1950's, the farming population dipped to less than 15 percent and continuing declines reduced that percentage to less than 5 presently. But agricultural production maintuned its upward climb and output per man hour jumped some 31 times in the past two decades

ELECT BRONSON HERD IMPROVER
