

## Youth attend grange camp

Harrisburg — More than 100 young people attended the annual youth camp of the Pennsylvania State Grange July 11, 12 and 13 at Camp Kanesatake near Spruce Creek, Huntingdon County. Miss Clarice Marquart, of

Knowles, Wis., the National Grange princess, was a guest.

Douglas Bonsall, of Millerstown R1, chairman of the State Grange youth committee, said the program featured educational and entertaining workshops for the campers. Climax of the three-day event was the selection of a State Grange prince and

princess to succeed George Rodgers, of Slippery Rock R1, and Jane Hill, of Kutztown R3. The new 1975-76 prince and princess will be crowned at ceremonies Saturday evening, July 12.

The annual junior camp will be held July 13-19 at Camp Kanesatake with approximately 225 campers and staff members attending. The program will include state talent competition and the selection of a new junior Grange prince and princess, according to Mrs. Alan Merkel, Kutztown R3, chairman of the State Grange's junior committee.

The reigning junior prince and princess are Fred Raney, of Enon Valley R1, and Karen Sattazahn, Womelsdorf R1, who have served for the 1974-75 year.

## Displays stress proper soil testing

Harris Laboratories has announced the availability of two exciting new merchandising aids that stress the importance of proper soil testing. Both carry the theme SOIL TEST RIGHT NOW.

These displays are available to firms who already have - or wish to establish and promote - a good testing program. The first aids are colorful 22' x 17" posters being offered free to anyone requesting them.

The second aid is a free-standing 6' display which serves as a complete "soil testing center" for modern

growers. Supplies and information are conveniently located on the display, allowing growers to easily obtain all the materials they need for sampling their farms.

Included with each display are a full supply of: sample collection bags, information sheets personalized with the firm's name and address, instructions on how to take a soil sample and fill out the information sheet, plus brochures explaining Harris' unique Triple Option Soil Analysis Program. Reports include alternative fertilizer recommendations for up to three options - allowing growers to soil test right now, yet select the most favorable cropping plan later. The three option reporting gives a valuable

hedge against uncertain future market conditions.

While the display encourages growers to take their own soil samples, it instructs them to return completed information sheets and samples to the display site for shipment to the laboratory. The easy-to-assemble unit is shipped complete for \$11.00.

"Accurate soil testing is the best way to apply the right fertilizer," explained Bob Harris. "But people tend to put it off or do a half serious job about it. The theme SOIL TEST RIGHT NOW hopefully remind people to get involved in soil testing immediately and to do the job correctly with a reputable laboratory."

"Over 75 percent of all soil samples are collected by growers, so we design the special stand-alone display to give firms an easy to use complete, coordinated center for supplying soil testing information to their customers," continued Harris. "The posters are designed for the firm that offers a more complete soil sampling program."

Those interested may obtain more information or order the posters and display by calling Bob Harris at 800-228-4091 or writing c-o Harris Laboratories, Inc., P. O. Box 80837, Lincoln, Nebraska 68501.

# CABLEVEY

"GO ANYWHERE" CONVEYOR TURNS SQUARE CORNERS

"This system combines the best features of auger and chain-type conveyors, yet does much more than either. A new "go anywhere" feed conveyor with great flexibility.

It will turn 90 deg. corners in any direction and can be installed in all sorts of long, twisting horizontal and vertical configurations. Feed is conveyed by plastic discs which are uniformly spaced about 4 in. apart on galvanized steel cable. As the cable moves, the discs move with it, elbowing around a special drive gear and sliding easily and smoothly inside the steel tube with scarcely any friction or noise, feed travels intact, up to 120 ft. per minute, with little or no particle separation. Main distribution lines can be equipped with a wide variety of drops, metering hoppers and other devices for unloading feed into holding bins, self-feeders, etc. Capacity, depending on density of the material, is up to 4,400 lbs. per hour.
