THE ULTIMATE GOAL

Our Herd Evaluation System is a profit building program offering you TOTAL breeding service. To survive in this business, you need a herd that efficiently produces large volumes of high quality milk. Applied genetics can produce the type of cow you need, and that is the basis of our system

Herd Evaluation is a guide for you to use to strengthen and improve your herd. Trained evaluators help you build, not just a program, but a proven program.

It has long been established that there is a definite correlation between functional type and milk production. The CALIFORNIA PHYSICAL TRAITS system points out the strength and weakness in each cow. This is important in building a solid Genetic Base from which to work and reproduce those animals which will not only produce large volumes of milk, but do it efficiently time after time.

HERD COUNSEL packs in the power by using SELECT SIRE BULLS, sires from other studs, plus proven bulls from private sources and those young sires with tremendous genetic potential. Put all this together and it gives you an exciting variety to choose from. All daughters are evaluated and a breeding guide is established.

The importance of genetics in breeding progressively better cattle is unquestionable and yet there is a very important facet in any business, that of service. We at HERD COUNSEL want to be known for PRODUCTS, PROGRAMS, SERVICE and PROGRESS.

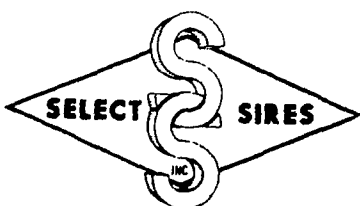

The Ultimate Goal High Producing Females
That Produce A Quality Product . . . That Reproduce Every Year
That Last and Last and Last . . .

The above picture may represent the ridiculous we find in breeding cattle that they are not always mated the way they should be. If you would like to change your breeding program into a profitable mating program just return the coupon

Box 46, RD2, Cochranville, PA 19330
FIELDMAN: DICK BROWN, 717-656-8626

"When should your child begin to walk?"

Every parent grandparent neighbor and uncle seems to have definite ideas on when your child should be able to take his first steps and they don't always agree

The fact is that children develop at different rates. A normally developing child may be expected to take his first few steps by holding on to furniture somewhere between the ages of 7 1/2 and 13 months. Standing by himself which is a little more difficult, can be expected between the ages of 10 months and 14 months

If your child is having difficulty in learning how to take his first steps or showing other signs of slow development, please send for our folder Understanding Your Child. It will help you measure your child's progress and suggest what to do next if slow development does indeed seem to be a problem. We want very much to help
