ARE NOW DISTRIBUTORS FOR

Nutrena Controlled Release CLS liquid supplement harnesses the productive power of urea more effectively than a conventional urea-molasses liquid supplement. And you get an extra margin of safety from urea toxicity. Check some additional advantages of this research breakthrough.

Nutrena Controlled Release CLS can help:

- Get uniform grazing — efficient usage of available roughage. With Nutrena Controlled Release CLS available in lick-wheel feeders, cattle can help themselves to supplement as needed. There's no bunching up and waiting for a daily feed of cubes, with lost grazing time or overgrazing within a limited area.
- Get cows bred on schedule, good conception rates, and big calf crops in short calving period — because the convenience and labor saving features of feeding Nutrena Controlled Release CLS often mean an improved nutrition level.
- Give cattle uniform nutrition. It's not like cube feeding where "boss" animals take charge. Once aggressive animals get enough liquid supplement they leave the lick-wheel feeders. Then, even tail-enders get a fair chance at the nitrogen, vitamins, minerals and energy in the supplement.

- Cut labor requirements, compared to dry feed, whether the liquid is self fed in lick-wheel feeders, top-dressed or mixed. With liquid, gravity can do your feeding and we can fill your lick-wheel feeders or storage tanks. Let us tell you more about Nutrena Controlled Release CLS.
