

**What's New . . .**

**Air Conditioning,  
Heating**

Reduced heating costs and even distribution of pure, stabilized air without creating drafts are the major benefits of a new air conditioning system based on pulsation for cow sheds, poultry houses, pig rearers, sties for sows and porkers, calf sheds and other farm animal structures.

Developed and introduced by the Dutch firm, Integra Lichtenvoorde B.V. of Groenlo, the Netherlands, the new system has been patented in many European countries as well as the United States and Canada. It is now available for export to the U.S.A.

The new air conditioning system features efficient

transmission of dosed, heated air via air channels located directly above the animals. The unit is said to have a very beneficial effect on the health and growth of the animals. Moreover, it insures that when the external temperature is low, the temperature within the shed remains virtually constant.

The installation consists of a high-pressure ventilator integrated with a pulsator, a set of plastic pipes for mounting over the animal boxes, an automatic safety device and an air discharge unit.

The manufacturer recommends that the ventilator be installed outside of the shed. It feeds a continuous air flow to the

pulsator which then doses the air and distributes it alternately over various parts of the shed. Fresh air from outside flows through the regularly spaced openings in the pipes to the various animal boxes.

The pulsator intermittently cuts off the flow of air to a section of the pipe system, thus suddenly stopping the flow to a specific part of the shed, while actuating the air circulation in another area. The used air is automatically removed through vents in the roof.

The alternating air circulation permits the use of very high air speeds in the pipe system so that any place in the shed can be reached with no waste of air. This far greater utilization of

the air means that relatively small quantities of new air are required, thus permitting considerable savings on heating costs.

The entire system is fitted with an automatic safety device which switches off the ventilator as soon as the pulsator ceases to operate.

**Campbell Hausfeld can help you in SO MANY WAYS!**

Air has many capabilities, chief of which is its ability to sustain life. Properly handled it can also help man to enjoy the "Good Life" by applying its capabilities to a wide variety of duties around the home, farm, or business. Air can be used for: caulking, drilling, sanding, chiseling, stapling, nailing, sand blasting, inflating, greasing, painting, cleaning, drying, buffing, vacuuming, riveting, running an air impact wrench, plus many, many more. **DON'T MISS EASY PROFITS** by overlooking the limitless possibilities of AIR!
