prohibit unfair and deceptive acts and practices relating that the matter entered into the health and safety of

Following the FTC official's decision, Wentick noted that "no decision in which the Government asserts the right to pick and choose what Americans may hear on controversial topics, can be permitted to stand."

"The cholesterol controversy is no exception."

The Federal Trade Commission's decision came after much testimony held during the summer months. Scientists and cardiologists for both the FTC and NCEN participated in the hearings giving the two different view points on the egg cholesterol controversy.

Diet-Health

Controversy Not New Although the FTC's decision was made late last week, the controversy over the relationship between ingested cholesterol and the risk of heart disease 15 not a new subject.

In the early 1960's the American Heart Association decided that a blanket recommendation to have everyone restrict their cholesterol intake was in order, following some research carried out on the subject. This overall intent was suggested since individual testing for people of heart disease risk with a blood testing technique was not available.

Consequently, eggs, which are one food higher in cholesterol than most, were tagged as harmful for consumption. Not for the minority of people who might actually need low cholesterol diets but for everyone in the nation.

An NCEN official recently noted that this blanket suggestion for restricting eggs was very illogical since there are other foods which can also be harmful to any given individual.

"People with gall bladder trouble shouldn't eat lima beans," the official stated, "but you don't see anyone advertising against the
