

# Sheep producers visit winners circle at Farm Show

**MELLISA PIPER**  
 Entries from the western portions of Pa. dominated the annual sheep show here at the Farm Show, however, area residents did spend some time in the winner's circle on Sunday afternoon and Monday morning.

Dr. and Mrs. Robert Herr, Narvon R2; exhibited the grand champion Dorset ram and ewe and also showed the

reserve champion ram in the same breed.

In the Hampshire show, the reserve champion ram was shown by M and J Hampshires of Dauphin R1.

Area residents also fared well in the Suffolk category as Mrs. W. MacCauley, Chester County, showed the champion ewe while Mrs. Milton K. Morgan of North Holland Rd., Lancaster

exhibited the reserve champion ewe.

Mr. and Mrs. Clyde Brubaker, Lancaster; frequent winners in the Hampshire divisions, were outdistanced to the prizes by several entries from Mercer County. The Lancaster Countains however did exhibit the fourth and fifth place Hampshire yearling rams and the third place Hampshire ram lambs.

Kenneth Brubaker, Lancaster, had the 5th place Hampshire ewe under one year of age and the second place Hampshire two ewe lambs. The Brubaker family also had the second place breeder's young flock and the second place pen of lambs.

Lancaster and Chester County entries in the carcass lamb contest also won top honors. Margaret Herr, Narvon; had the first place lightweight carcass lamb on foot. Third place went to her brother Chrisitan. Warn G. Menhennett, Chester County had the sixth and seventh place animals in the same class.

Barbara Herr followed her sister and orther to the winner's circle by placing second in the carcass lamb class for heavyweights on foot. Elizabeth Herr had the

Showing sheep takes a lot of cooperation. Mrs. Warn Menhennett (center) is aided in showing her get-

of-sire animals in the Shropshire division by Clyde Brubaker, Lancaster (center).

## Pesticide meeting changed

Several factors have forced the change of previously scheduled Lehigh County commercial Pesticide Certification Educational and testing meetings to March 17th at the Holiday Inn in Kulpville.

County Agent Glenn Ellenberger, noted that instead of two meetings for Agriculture in January on 15 and 16 for Southeast Pennsylvania, one consolidated meeting for March has been replanned, 9:30 a.m. to 3:30 p.m.

Commercial applicators who took the basic course in December will receive notice of the change and forms for reservations in the near future.

## Apple champions selected

HARRISBURG - The Franklin County Horticultural Society for the third straight year captured first place in the county apple exhibit at the 60th Farm Show. The Franklin County group also won the Gabriel Heister Award for

the best collective display of apples.

Mohr Orchards, Inc., of RD1, Orefield, Lehigh County, won the State Horticultural Association Award for the best bushel box of apples.

### NORTHCO Serv-O-Matic Dairy Feeder

TWO MODELS AVAILABLE

The Model 101 Serv-O-Matic may be mounted through the wall in a loose housing system or through the fence line for open lots. Side braces are also provided for mounting and installation.

The feeder opening is designed to permit only one cow to eat at a time. A 2 inch auger drops approximately 1 lb. of concentrate per minute into the feeder. This is the same rate the cow eats. No feed remains in the feeder when she moves away.

A simple magnet around the cow's neck will activate the feeder motor as she places her head into the feeder. Cows without a magnet are unable to get feed.

### "Selectively" Provides More Feed to Top Producers

The Serv-O-Matic Dairy Feeder enables you to feed additional grain and concentrates only to the top producing cows in your herd! It eliminates the labor problem of separating the herd in a loose housing system to give individual attention to top producing animals.

The Serv-O-Matic is activated by a simple magnet fastened around the cow's neck. This way, only the cows you select can activate the feeder and receive additional ration... yet all animals can still be housed together.

Each cow producing 10 lb. or more over the herd average should receive extra feed. In actual trials, cows on the Serv-O-Matic consume an extra 10 lbs. of grain per day (while eating some less in the parlor). Milk output shows an average increase of 1 lb. of milk for each pound of concentrate fed through the Serv-O-Matic... some as high as 5 lbs. of milk per pound of feed!

One Serv-O-Matic will normally handle 20-30 cows in an 80-120 cow herd. Normal procedure is to put fresh cows on extra ration and remove the magnet when production drops to a predetermined level.
