WAYNE BROOD 'N IRON **BREAKS NATURE'S** BARRIERS

Iron deficiency probably plagues no other specie to the degree it does swine, This is partly due to the large litters the modern. genetically-improved sow produces in confinement.

With 10, 11 or 12 pigs per litter, each pig only gets a fraction of the total iron available to the entire litter. These fractional amounts of iron are not sufficient to meet the needs of the nursing pig. according to Dr. A. J. ("Al") Svajgr, Wayne Feeds Manager of Swine Research,

"Until now, the customary way to get supplemental iron into the baby pig was with an iron injection. However, these shots take time, cause stress, open the door for infectious agents and are sometimes neglected altogether."

"The sow can now supply the baby pig with enough iron to prevent anemia in the pig ... if the sow's fed Wayne Brood 'N Iron," Svajgr explained. "It was previously thought impossible to accomplish this seemingly obvious solution to anemia. Nature has developed several highly sophisticated barriers which prevent higher quantities of iron from getting through to the sow's milk supply.

"The most important natural barrier of all is the sow's gut wall. It allows only about 10 percent of ordinary ingested iron to pass into her bloodstream. In order for iron to cross through the wall of the small intestine, it must first be combined into a biological complex of amino acids and proteins, a process called 'chelation.' Only a

limited amount of this complex formed naturally."

The Wayne researcher said that merely feeding more of an ordinary iron supplement to the sow isn't the answer, since little of it would be absorbed. "Furthermore, if fed in excessive amounts, this ordinary, nonchelated iron would probably cause irritation in the sow's stomach and intestine.

"Wayne Brood 'N Iron is man's first successful conquest of these barriers in the sow. The iron in this new product is chemically bound to predigested protein containing amino acids, polypeptides and peptides." As a matter of fact, said the swine researcher, it's much like the form of iron that occurs in natural tissues.

"At the present time, several major benefits are available from Wayne Brood 'N Iron," Svajgr said. They

- Consistently high hemoglobin levels in baby pigs, even without iron in-

-Two-tenths of a pound heavier birth weights.

-An increase in the liver storage of iron in pigs at

-Increased iron levels in the blood plasma of both sows and pigs.

-And, it performs a breakthrough by raising the iron content of the sow's

"Baby pigs need the extra iron they get from Brood 'N Iron," said Svajgr. "If they don't get it, the pigs will have depressed iron levels by the end of their first week of life.

This new product has a beneficial effect on pig performance, too.

of having to use an iron syringe," the Wayne the Wayne researcher concluded. MODEL MD WELDING.

CUTTING OUTFIT 13 DESCRIBED IN rego leaflet

A complete welding and cutting outfit for medium to heavy duty work, the Model MD kit is described in a new, two-color leaflet from RegO.

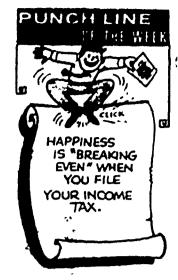

Capable of welding, cutting, brazing, soldering, hardfacing, metal flame priming (paint removal), bending, straightening, weld metal removal (deseaming), plate buckling, preheating, and other applications, the Model MD outfit is well suited for work in manufacturing shops. maintenance departments, hospitals, schools, farms, car clubs, gas stations and

garages, body and fender shops, welding and brasing

shops, and by hobbyists. Included in the Model MD outfit are a welding torch. three welding tips, gas mixers, cutting attachment. acetylene cutting tip, heating tip, two-gauge acetylene regulator, twogauge oxygen regulator, and a welding and cutting manual. A deluxe kit also includes 20 feet of dual welding and cutting hose, goggles, and a round file lighter.

The Model MD outfit permits users to weld from .06 to 7-16 inch steel and to cut steel up to two inches thick. Additional tips are available to permit cutting up to six-inch steel.

For more information and copy of the Model MD leaflet, write RegO, Welding

If we can't get you an extra pint per cow per day you win \$50...

summary of research ex-

periments showed that

Brood 'N Iron pigs weighed

two-tenths of a pound more

at birth than those that were

injected with iron and whose

mothers received ordinary

iron," Svajgr explained. "By

three weeks they were over

six-tenths of a pound heavier

than their iron-injected

counterparts. This extra

weight and vigor means

more live pigs at weaning.

Brood 'N Iron pigs are better

able to withstand the

stresses of commercial hog

production and do it in less

time and with less feed

without the stress and bother

Free Equipment Test

Right now, your participating Surge dealer is offering you a unique chance to make him put his money where his mouth is First, he'll come to your farm, and at no cost or obligation to you, he'll do a complete analysis on your vacuum system

\$50 is yours if he can't improve your production a pint per cow per day.

Once your Surge dealer has finished his evaluation, he'll level with you If your system needs work, he'll tell you, and offer to put it in top shape If your vacuum pump appears to be losing efficiency, he's in the position to make this challenge-a new Alamo Vacuum pump will improve your production at least a pint per cow per day, or he owes

Free 10 day trial

Since vacuum pump inefficiency is one of the greatest single causes of losses in milk profits, be sure to take advantage of this free trial offer You've got at least \$50 to gain and possibly thousands if a faulty pump has been gradually cutting your production. For additional information, contact your closest participating dealer or write to Babson Bros Co, 2100 S York Road, Oak Brook, Illinois 60521 At participating dealers only, Offer ends March 31, 1976 ·

We make your cows worth more.
