

# New From Pennfield

## Cut beef cattle feed costs 10.6%

## Earn \$960\* more profit per hundred head

It's true, Pennfield Feeds new 40% concentrate #726 or silage balancer #746 will assure you equal weight gain with 10.6% less feed. That's the same as feeding every 11th beef cattle in your herd free. It's the same as feeding 39 extra head free when you have 100 acres planted in silage corn. In short, it's another Pennfield profit maker for you, the beef cattle farmer.

Here's the story. New 726 or 746 contain a new, FDA approved non-hormonal additive called monensin sodium (monensin). It is a natural product, like yeast or yogurt. And it works in the cattle's stomach to improve his natural rumen digestion and absorption of nutrients and other growth and energy products. Your cattle experience the same rate of growth with 10.6% less feed. And these new Pennfield products are 5% more efficient than similar competitive products, just now being introduced.

Monensin has been thoroughly tested in university and government studies and found both safe and effective.

So, if you want to grow every eleventh beef cattle in your herd free and increase your profit by \$960 per hundred head by cutting your feed costs 10% or more, call your Pennfield man right now. Ask him about new #726 and 746.

He wants you to make more money.
