ATTENTION: DAIRYMEN

To save money and improve milk production

Feed Dairy Special 40XX

The key to efficiency in any dairy feeding program is getting maximum performance out of homegrown grains and roughages while keeping out-of-pocket feed costs down. That's why Vigortone developed Dairy Special 40XX for use in legume hay or haylage rations.

This potent pre-mix contains abundant phosphorus to balance off the high calcium content of these roughages and provides proper levels of other major minerals, trace minerals and vitamins.

Legume programs are well balanced with Dairy Special 40XX, and the need for supplemental protein is much less. Best of all, your cows soon respond to their full bred-in potential to produce milk.

Dairy Special 50XX for the dry cow

Proper nutrition for the dry cow is just as important as for the producing cow. It's during this period that the stage is set for the level of production she will have throughout the lactation period. Vigortone's Dairy Special 50XX is properly suited to fortify high roughage rations of dry cows and keep them in excellent condition right up to freshening.
