

AGWAY CORN STARTER

PREPARED SPECIFICALLY TO HELP GET YOUR CROP OFF TO A FAST, STRONG, EVEN START:

- ★Corn Starter is an ammoniated grade of plant food. Each particle is a complete fertilizer. You avoid the potential crop damage that could be caused by using simple blended materials high in urea and diammonium phosphate. (Blends are ideal for plow-down and side-dress . . . not for row application!)
- ★Corn Starter is fortified with zinc, with magnesium and with extra boron, the three "minor" elements most likely to be lacking and those most important during early development of the plants.
- ★Corn Starter is high in water-soluble phosphorus. A major key to a successful crop is plenty of phosphorus in highly available form, as growth begins. Agway Corn Starter supplies it in the form that is most needed.
- ★Corn Starter is economical. It doesn't take tremendous quantities of Agway Corn Starter to do the job. In fact, a maximum of 200 lbs. per acre is recommended. You get results and economy with Agway Corn Starter in the planter box.

Don't chance a poor start. Help assure an energy-packed corn crop with the one fertilizer designed to get things growing right . . . Agway Corn Starter.
