This new formulation is now being produced by us as a high grade row fertilizer for corn. This analysis is very high in phosphorus, low in nitrogen and potassium. Any response to phosphorus will be in the first 2 or 3 weeks after planting. Nitrogen in this analysis is not derived from urea. The phosphorus is largely derived from MAP. In our opinion on Page 9 of the March 27, 1976 issue of the Penna. Farmer is an excellent article on row fertilizer for corn. This motivated us to produce this analysis.
