

chisel

the BRADY way if you want to hold your soil and spend less time and money on plowing

shred

the BRADY way— fine and fast on up to 20% less power 2166 shredder.

Chiseling with a Brady, for the first time on your farm with your tractor, will show you right away that chisel plowing has a lot to offer.

First, it's so easy. No set-up just go. Take a wide cut instead of a narrow one. Forget about back furrows and headlands. With a Brady chisel in bean fields you don't even need to shred first.

Plowing with a Brady chisel leaves your fields thoroughly worked, ventilated, opened. Rips up plow sole. Mixes trash on top and in the soil. Creates conditions ideal to resist soil blowing and to catch and hold more winter moisture.

Fall chiseling the Brady way gives you

the jump on spring. Your fields are ready for one-pass seedbed prep with Brady field cultivator and tine harrow. It all adds up to earlier planting in better, higher-moisture seedbeds.

Brady is a leader in building chisel plows that stand up to fast, deep tillage. Sizes to 16 feet. Mounted and pull-type design.

Ask your Brady dealer for a demonstration. See the difference in field efficiency—Brady chisel vs. conventional tillage. Compare Brady's quality with any other chisel, too. See your Brady dealer, or write us.

Support price increased

WASHINGTON, D.C. — As of yesterday (October 1) the support price for manufacturing milk was increased to \$8.26 per hundredweight.

This increase of 13 cents per hundredweight will support milk prices for manufacturing purposes at approximately 80 per cent of parity. The increase reflects the increased costs of dairy farming inputs, including feed, labor, equipment, and other items. Also, the increase is needed by many dairymen in the mid-west and other areas who have experienced a dry growing season. Unusually high amounts of feed and roughage will have to be purchased by these dairymen.

It is expected that the increase in support level will have very minimal effects on consumer prices of dairy products. Most dairy foods are selling in the commercial market at prices above the support level.

Commodity Credit Corporation, which purchases excess supplies of dairy products, has announced a five cent increase for butter at New York, N.Y., Jersey City, N.J., and Secaucus, N.J. The price change will be from 87.75 cents per pound to 92.75 cents per pound. Commodity Credit Corporation purchase prices for butter at other locations will be adjusted for freight costs, but in no case less than three cents per pound below the New York purchase price.

Purchase prices for extra grade non-fat dry milk remain unchanged from current prices of 62.40 and 63.40. Cheddar cheese (US Grade A) purchase price will be increased from 90.50 cents per pound to 92.50 cents per pound.

HERE'S THE 015.

HERE'S WHY IT'S A STEEL.

1. A high voltage ignition system and an efficient combustion chamber means it'll start work when you do. Every time.
2. A "no-thumbs" hilly automatic chain oiler lets you concentrate on cutting. Not oiling.
3. Hot chamber magnesium die-casting makes the housing tougher. And the whole saw lighter.
4. Balanced fuel and oil tank capacities keep you from having to refill one when there's still plenty in the other.
5. It's been designed to last at least twice as long as any other saw like it.
6. And by lasting twice as long it'll really only cost about half as much.

AND HERE'S THE BEST PLACE AROUND TO GET IT.

BASIC HEAT. BASIC PRICE. BASIC WOOD HEATER.

Wood heat is basic as you can get. It's inexpensive. It's reliable. And it's the kind of heat America is coming back to. The R-7 Wood heater is also basic. It's brick lined for even heat. It's automatically controlled and airtight for efficient heat. And it comes with a cast iron grate for longer lasting heat. All of which make it worth your while to come home to. And the time bills nice to get away from.

Good heat. Good price. And a wood wood heater. That's getting back to basics. Add that to Shenandoah.
