Growing pains cited

WASHINGTON, D.C. - People in rural communities have been accustomed to thinking about problems that come with population decline. Now they need to think about problems that can come with population growth, according to the U.S. Department of Agriculture.

The new population trend in this country is one of growth in rural areas. For the first time this century except for the Depression years, the population of nonmetropolitan counties is growing faster than the metropolitan population. (Nonmetro counties are ones with no city as large as 50,000 population.) More rural residents are choosing to stay in their home area instead of moving to the cities, many rural migrants of the past are returning home, and more city natives are moving to rural areas.

According to USDA, most rural communities want to get in on the new population growth. Growth is a sign of a community's economic vitality and is usually a source of community pride.

Glencoe® MODEL SS "SOIL SAVER"

A NEW TWIST TO TILLAGE! A totally new and different approach to soil management! The Glencoe "SOIL SAVER" creates a non-compacted, "ridged" field that just naturally protects against erosion by wind and water! Instead of simply turning over the soil and leaving it bare to the elements, the "SOIL SAVER" opens up the land down deep to catch and hold available moisture. — Controls runoff, holds and stores rainwater for thirsty crops — soil surface is left open and blended with crop residues that protect precious topsoil! Cutting "slicers" cut up heavy stalks, leaves and root crowns and leave the soil ready to be turned under by the helical blades following. Designed so you can work your stubble immediately after harvest, generally without chopping or shredding.

See our display today!

The new twist to tillage.
