# Pesticide law modified

WASHINGTON, D.C. - The Environmental Protection Agency has provided farmers and ranchers with a simple way to combat insects and other pests not listed on the labels of EPA-approved products without violating Federal pesticides law.

Under the 1972 Federal pesticides law, it is illegal to use a pest control product "in a manner inconsistent with its labeling." Strictly interpreted, this could mean that if a pest - be it bug, rodent or weed - is not named for treatment in the labeling of an EPA-registered product, a person could run the risk of violating the law by using the product against the pest.

But EPA Assistant Administrator for Enforcement Stanely W. Legro said, "Congress intended that EPA exercise certain discretion in permitting pesticide applications that are in no way harmful and bring about beneficial effects."

"We recognize that sudden, unusual pest outbreaks can occur on the farm and

elsewhere for which no EPA-approved pesticide may be available. We've put into effect a new policy to deal with this situation. It allows for the use of EPA-registered products to control unanticipated pests, after checks with knowledgeable experts on questions of effectiveness and environmental impact.

"The policy should be a great help to persons in the business of raising crops and livestock. Properly followed, it minimizes the possibility of any environmental harm."

The policy is entitled "Use of Registered Pesticides for the Control of Pests Not Named on the Label in Agriculture and Other Non-Structural Pest Control." It applies to farmers, ranchers, persons who apply pesticides in raising trees, flowers and other ornamentals, and pesticide applicators for rights-of-way areas such as roadsides, electric powerlines, pipelines, and railways.

People in these occupations troubled by a rapid and unexpected pest

infestation should follow these steps under the new policy:

- Seek the recommendation of a "knowledgeable expert" regarding which EPA-accepted pesticide will control the pest. This expert may be the farmer or user himself, or any other person who meets the educational or practical experience standards prescribed in the policy.

- Use only a pesticide that is EPA-registered for application on the crop or site that needs treatment.

Legro emphasized that in using a pesticide against an unnamed pest, all other label directions must be followed.

## powwow

## set

WASHINGTON, D.C. - Dairy farmers and consumers will join with the U. S. Department of

Agriculture this December to sponsor a two-day conference on milk marketing.

The conference is scheduled for December 14 and 15 at the Washington Hilton Hotel, here.

Sponsoring the conference are the U. S. Department of Agriculture, the National Milk Producers Federation and the Community Nutrition Institute.

While separate conferences have been held within the past year, the upcoming conference is the first joint effort by dairymen, consumers and the USDA to discuss the issues.

Major papers on the economic forces and institutions in milk marketing will be presented and discussed. In addition, the conference will discuss alternative economic systems for milk pricing and will consider the role of dairy cooperatives, milk processors and food retailers in milk marketing.

Registration for the two-day conference is \$75. A limited number of scholarships will be available. For more information, contact: Conference on Milk Marketing, 1910 K Street, N.W., Suite 700, Washington, D.C.

## 4 NEW SPREADERS... 180 to 500 bushel capacity

Now, Gehl offers spreaders for all size farms. All constructed from hot-rolled, corrosion resistant steel. Auger beater unloading and high-nickel teeth handle all types of manure and keep the pullin easy. Beater shafts are 1 1/2" or 2" in diameter. Double chain aprons with cast steel sprockets are included in the two largest models. Hydra-Liquid end gates available.

## SOYBEAN ROASTING ON YOUR FARM

For peak feeding value have your soybeans roasted. (To kill toxic enzymes in raw soybeans.)

1. Roasted soybean (not just cooked), increases digestibility by 15 percent.
2. Increases weight gain for beef & hogs.
3. Increases butterfat in milk & egg production.
4. Improves animal health, reduces vet bill.
5. Eliminates hauling to the mill & back to farm.
6. Feed your own grown grain (Not exchanged with others).
7. Beans remain whole. Store for months without losing any feeding value.
