

## LIFE on the farm

By DIETER KRIEG

Ears of corn pounded upon the metal apron of the elevator. They fell from the back of the wagon as regularly as steps in a military march while an electric motor powered an unloading wedge pulled by two cables.

The elevator - possibly weary of heavy-duty service during this time of year - screamed loudly as it labored noticeably to hoist the golden ears of

corn into the corn crib. If the banging of the corn on metal didn't keep a fellow awake, then the loud screaming certainly would. In addition to that, there was a definitely audible "thud" each second as a pile of corn was dropped into place by the elevator.

I can still picture the scenes and recreate the accompanying noises in my mind, even though it was 14 years ago. Every once in a while an ear of

corn would come tumbling down over the side. Quite a few individual kernels leaked out here and there too. It wasn't really all that many - but enough to cause a disaster.

Everything looked innocent enough when we finished work that evening. The cows were content, the weather was pleasant, and work had come along favorably all day.

Dipping milk out of the bulk tank to take along up to the house, it was time to call it quits for the evening, eat supper, watch a little T.V., do some homework, and go to bed.

It was early next day when Dad announced the tragedy he discovered.

"Number 12 is tot," he said.

(Number 12 is dead). The expression on his face registered unbridled anguish.

Number 12 was a cow - but not just any cow. She was the milk production leader of the herd for the year and had a commanding 1600-pound lead over the second-place bovine. Poorer cows seldom die on the farm. It's always the better ones. Every dairyman knows that.

Down behind the corn shed was Number 12, with a 220-volt electric cord in her mouth. She had evidently been relishing the kernels of spilled corn during the night and was electrocuted by the powerline which wasn't unplugged the previous evening at quitting time.

## What's new

### CONTROLLED ENVIRONMENT CAPSULE

The Ag Best Corp. of Nappanee, Ind., now offers

an improved concept in totally equipped confinement units for farm animals. Their newly designed double-width

modular capsule is 24 feet wide and is ready for placement over a permanent concrete holding pit. The capsule is delivered complete and ready to use with all equipment installed.

The ventilation system for the 24 foot wide capsule is simple yet effective and provides the controlled climate in which pigs, sows, hogs and calves thrive best. Each building comes complete with thermostatically-controlled, fan forced, furnaces to suit the size and needs of the unit. Interior walls are of white fiberglass that is easy to clean and sanitize; and the pen partitions are Ag Best designed with vertical bars and a permanently attached latch system which makes every partition work as a gate.

Capsule models in the 24 foot wide size offer from four to 24 farrowing stalls, combination farrowing building and nursery facilities, hog finishing units and gestation buildings.

Ag Best also manufactures a 12 foot wide portable unit capsule, of varying lengths, to suit the customers needs.

### MULTIPURPOSE LUBRICVANT

Safe new multi purpose aerosol spray tool from Dynachem, Inc. gives value by eliminating many single purpose products. It is non flammable, yet has a penetrating solvent and a long lasting semi-solid lubricant that clings to even glass. Clinging action resists throw-off to leave surfaces with a lasting greaselike lubricant yet is greaseless and non-staining. It contains no silicones or flammable kerosenes.

Double acting formula works two ways-penetrates: cleaning and dissolving solvent quickly and safely penetrates frozen parts-lubricates: semi-solid clinging lubricant spreads to the most minute cracks and crevices to give a long lasting friction-free coating.

Dyna Chem Lube protects with rust inhibitors that prevent corrosion from forming. It may be used as a battery cleaner and protector, rust inhibitor, demoistrant, weld anti-spatter, open gear and wire rope luricant.

# THE SENTINEL

## Round-the-clock guardian of stored milk temperature

If you depend upon your milk check for a living, protect that income by insuring milk quality.

The least expensive, single-payment insurance obtainable is the Sentinel — the heavy-duty, 10-inch recorder which charts round-the-clock temperature of your milk-cooling or holding tank.

Assure yourself — and your processor — that proper milk temperature is always maintained.

Keep a permanent log of compressor operation and tank cooling or pre-cooling efficiency, from first filling to pickup.

Cleaning temperatures — increasingly questioned by sanitarians — are recorded on the same chart.

At little added cost, the Sentinel is available with provision for actuating an alarm or warning light if milk holding temperature rises above pre-set level.

Remember — if it prevents the loss of only one tank of milk, the Sentinel has paid its own way.

See your dealer about the Sentinel — or drop us a line
