NEW SELF-STORING STORM-SCREEN DOOR DOUBLES AS PORCH ENCLOSURE PANEL

Season-all Industries announces a new storm-screen door designed for convenience and flexibility. The unique construction of the Model 741 makes it ideal as a porch enclosure panel, too.

Two panes of safety glass and a fiber glass screen adjust to five different positions for maximum comfort and flexibility.

The Model 741 features self-storage for both glass and one screen insert.

The storm-screen door comes in sizes to fit virtually any opening, in widths from 29½ inches to 38 inches and in heights from 78¼ inches to 90 inches. A complete selection of accessories needed to assemble and install the porch enclosure panels is available for every type of enclosure.

One minute's worth of manure

2800 gallons from the Badger Manure Pump

The Badger Liquid Manure Pump can cut hours off manure spreading time because it pumps at a rated capacity of 2800 gallons per minute. It agitates and converts even heavy, fibrous manure into an easy-to-handle slurry. With the flip of a lever, you are pumping and can easily fill a 3000 gallon tank in less than two minutes.

The Badger Liquid Manure Pump is portable. Move it from one pumping location to another. Pump from pit to storage basin . . . to above ground storage tank . . . or to spreader. The Badger Pump is designed with the know-how that comes from years of experience in developing liquid manure systems. It is ruggedly constructed to give you years of heavy-duty service.

SMALLER-SIZED ROUND BALER

Sperry New Holland has introduced a smaller-sized round baler, the Model 845, which rolls round bales weighing up to 850 pounds.

The Model 845 makes a 4½-foot diameter bale. It can be used with a 40 - 60 h.p. tractor and its capacity ranges from six to 10 tons an hour, depending on crop and baling conditions.

The new model baler has the same exclusive design features as the larger Model 850, which result in a clean crop pickup, fast and sure core formation and continuing proper bale formation.

Both models are equipped with steel apron chains, instead of belts, to roll the hay.

Other exclusive features include floor chain lugs that move the hay back into the chamber, curved leaf springs that guide the hay upward to the upper apron chain to start the rolling action and the wedge-shaped bale chamber where the core is first formed.

These features on both models permit fast and efficient rolling and baling of a wide variety of crops, not only grass and legume hays, but corn stalks, straw and soybean residue as well.

BEDWETTING

— Start A New Life!

- Your boy or girl can put an end to that distressing problem of bedwetting (when the cause is not an organic defect or disease)
- NO special garment required
- NO attachments to your child's body
- NO annoying bells will ring
- No child should have to contend with this problem, when it can be solved so simply. Our solution is the ONLY original development in the field of bedwetting control in over 20 years. This unique approach can be a bright new horizon for your child.
