

Take a tour inside a Harvestore

Harvestore is more than a storage structure. It's a complete storage & feed-processing system. This "inside tour" reveals a few features that make the Harvestore concept of crop management and preservation a reality.

Top-loading, bottom-unloading

The first feed into the structure is first out. Structure can be refilled as often as you wish without interrupting feeding. There is no abrupt change in ration.

Glass-fused-to-steel

Over 51,000 lbs. of steel and over 1,800 lbs. of glass go into a 2580 Harvestore structure. The smooth, rugged interior/exterior finish is permanent and non-permeable to air and water. Resistance to abrasives, acids, wind and weather is extremely high. Glass-fused-to-steel sheets overlap. Torqued bolts are tightened with pneumatic wrenches. Joints and seams are sealed. Every structure is pressure-tested for air leaks.

Exclusive Harvestore breathers... bags compensate for internal pressure. In the heat of the day, the bags inside the structure expand forcing air through vents, to the outside. At night, the bags cool and contract, causing only fresh air to fill with...
