

Ketosis is basically an energy problem

[Continued from Page 16]

liver is often irreversibly damaged and there will be no response to any treatment. Individual therapy is best handled by your veterinarian who is familiar with your feeding program and what has been successful for him.

There are a few items which can be helpful for prevention. Most importantly, do not have cows excessively fat at calving. Increase level of concentrates rapidly after calving, dividing them into as many feedings a day as is practical, and with sufficient energy to provide for all the needs of production. Do not make abrupt changes in rations during early lactation or do anything that might tend to throw a cow off feed. Make all changes gradually. Use only high quality roughage and grain to encourage high feed consumption. Avoid high moisture grass silage which is relatively high in butyric acid. Most importantly, provide a balanced ration. Ketosis can be prevented.

BANVEL DISTRIBUTOR

Pre-emergence tank-mix controls
grassy and broadleaf weeds
without carryover

Banvel + Lasso[®]*

a giant first step toward total
weed control in field corn

Successful on millions of acres where corn is the major crop, the Banvel + Lasso herbicide combination can give you "near perfect" control of a wide spectrum of grassy and broadleaf weeds, when used according to label directions.

Banvel + Lasso herbicide is compatible with most fluid fertilizers. It needs no

incorporation. There is no carryover.

Take a giant step toward total weed control. Call about the Banvel + Lasso combination. Remember, the "near perfect" herbicide is the one you build...starting with Banvel herbicide...from Velsicol.

*The combination is effective on all major soil types, except light sandy soils. Lasso is a registered trademark of Monsanto Company.

To achieve best results, be sure to read, understand and follow the label.
