**NEW  
Dual**

**Strong Grass  
Herbicide  
for Corn**

Controls weeds longer than other grass killers. Even controls yellow nutsedge (northern nutgrass) when applied at the regular preemergence rate. High concentration means more acres sprayed per can — fewer cans to get rid of.

Dual<sup>®</sup> trademark of CIBA-GEIGY for metolachlor

Introducing **Tolban**<sup>™</sup>

**The preplant herbicide that won't hold back your beans.**

A cold, wet spell soon after soybeans come up is enough stress for your crop to contend with. The last thing it needs is added pressure from a herbicide.

Tolban has excellent crop tolerance even when it's cold and wet. So your beans take the cold, wet weather better.

Tolban gives you consistent control of most annual grasses. And some broadleaf weeds.

See us about Tolban. Find out for yourself how it can help your beans start strong, and finish clean.

**Alfalfa  
weevil  
control-**

*who  
needs it?*

Maybe you do. Maybe not. We'll scout your fields and tell you. We'll do more. We'll advise on what to do about an infestation that needs treatment.

We'll probably suggest new Supracide<sup>®</sup> insecticide. We don't know of a weevil

control material that works better, or longer.

We'll also get the Supracide applied if you want us to.

A pretty complete service? You bet. It's designed to save you time and make more alfalfa. Call us.
