

WHAT'S NEW

FEED CONVEYOR

A new end-load "Convey-N-Feed" cattle feeder with flexible sections which incline and decline up to 30 degrees to permit the conveyor to go from horizontal to incline and back to horizontal is announced by the Jamesway division of Butler Manufacturing Company, Fort Atkinson.

The unit can be used as a conveyor only, or two machines in one as both a conveyor and a cattle feeder operated by a single low-horsepower drive unit.

Feed is conveyed 90 feet per minute and falls off the adjustable tapered steel feeder bottom into the bunk continuously from one end to the other to feed dairy and beef cattle fast.

The double 667 pintle chain and steel flights in the 18 1/4 inch wide galvanized steel conveyor ride on steel support angles in the feeder section. Standard galvanized steel bolt-on covers protect the feed and feeder from wind and weather.

The adjustable double-belt drive unit features a safety switch to control the machine at the drive end for safe servicing.

The "Convey-N-Feed" cattle feeder can be supported by hot-dip galvanized steel stands or suspended from hanger brackets.

TILLAGE TOOLS

Krause Plow Corporation, designers of the original flex-wing disc equipment, has introduced as one of their new flex-wing tandem disc harrows this season, the 1950 Series.

With working widths from 25 feet to 31 feet this hefty model features staggered overlapping front disc gangs

to avoid those costly uncut strips.

With its three-section configuration, the unit boasts over-center wing folding which cuts its width to only 16 feet for easy transporting.

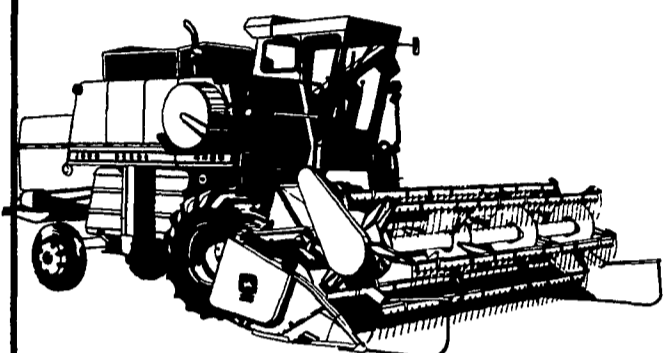

The three-notched outrigger blades are standard as are the rugged scraper assembly, extra-heavy cast iron spools and tie rods, and newly-styled steel tube bearing arms designed to conform to the curvature of the disc blades. Dual center wheels are standard with duals optional

on the wings.

The 20 inch discs can handle up to 128 pounds each in the field, the 22 inch up to 143 pounds per blade.

Included as a standard feature for this rugged piece of field equipment is Krause's exclusive hydraulic self-leveling tongue which "feathers" the unit to insure uniformly level fields. Also available are the Rock-Flex models designed to move easily in the rockiest surfaces while both protecting the unit and doing an excellent disc job in the field.

Match your separator with a rigid-bar platform from 13 to 24 feet

Match your self-propelled John Deere Combine (1970 to present) with the 200 Series Platform with rigid cutterbar. Advantages include fast ground speed and positive feed plus many adjustments to match your conditions.

Productivity excellence of the John Deere 4400 with 4-row head makes it a leader in the medium-price class

Compare a John Deere 4400 with a 4-row corn head or 4- or 6-row row-crop head with others in its class. See why John Deere corn head performance is so exceptional in standing or down corn, why the unique John Deere row-crop head minimizes soybean shattering and lets you step up ground speed.

Check the 4400 separator advantages. There's a 100-hp 329-cubic-inch diesel engine. Aggressive wedge-action threshing with a 38-inch cylinder. Thorough separation on long walkers with 6-inch crank throw. Uniform, full-width shoe feed with exclusive auger conveyors. The grain tank holds 72 bushels, or 102 with extensions. A quiet cab is available outfitted with a high-backed Personal-Posture™ seat. See and compare the productive 4400 soon.

HYDRAULIC FITTINGS

Look for a new, simplified way to buy quick-connect hydraulic fittings, soon to appear on the counters of farm equipment dealers. It's the Quick-Connect Kit, from Snap-Tite, containing all the tractor-implement combinations in one display tray. Each coupler, adapter, and tip is stamped with an identifying number that appears on the display chart. Simply locate the type of equipment on the chart and

select the correct Quick-Connect from the tray. Snap-Tite Quick-Connects permit complete interchangeability of equipment.

Couplers, adapters and tips are made of high-strength plated steel for corrosion resistance, and designed for maximum flow capacity.

For more information on Snap-Tite Quick-Connect hydraulic fittings, contact Snap-Tite, Inc., Union City, Pa. 16438.

MONITOR FOR PLUGGED NOZZLES

Ag-Chem Equipment Co., Inc. markets a new nozzle monitoring device called Tel-A-Flo. Tel-A-Flo detects plugged spray nozzles the operator cannot see. The

system electronically senses nozzle spray. If the nozzle ceases to spray, a control panel light alerts the operator to the malfunction. Tel-A-Flo is intended to help eliminate application rework, customer dissatisfaction and crop loss claims resulting from the "streaking" caused by plugged nozzles. Tel-A-Flo works on a simple 12 volt system, has stainless steel construction, and can be mounted on any known existing crop sprayer. The device is available in one, two, or three unit kit form. Send for complete details in illustrated fact sheet. Ag-Chem Equipment Co., Inc. 4900 Viking Drive, Minneapolis, Minnesota 55435. Phone: (612) 835-2476.

Vicon fertilizer spreader

The most accurate fertilizer spreader you can buy

All types of granular or powdered materials can be spread, and are deposited on the ground in an even, rectangular pattern. Corn and

seeds can also be sown without modification to the machine. The Vicon pendulum system is designed for a long, troublefree life. Hoppers and extensions are made from glassfiber reinforced polyester which cannot corrode. The working parts are also made from polyester and stainless steel and ball and roller bearings are widely used. Out-of-work time is cut to a minimum.

IN STOCK 3 POINT - 600 AND 900 LB. CAPACITY
