Students seeking farm jobs

UNIVERSITY PARK, Pa. Farmers needing temporary workers, especially for the Summer, have an opportunity to help to educate young people who will make their careers in agriculture. The young people are students from urban backgrounds now majoring in agriculture at The Pennsylvania State University.

from urban areas express a strong need for on-farm experience not available on the campus, according to Leon J. Johnson of the Department of Agronomy, College of Agriculture. Johnson said the urban students realize that formal course work becomes more meaningful with some parttime farm employment.

Johnson is gathering the names, addresses, and telephone numbers of farmers interested in hiring students for the summer or for somewhat longer periods. His address is 13 Tyson Building, University Park, Pa. 16802. The telephone number is 814 865-1147.

"Here is an excellent opportunity for farmers, who need temporary help, to participate in educating people who will be serving farmers in the future," he stated.

A survey made at Penn State in 1973 revealed a changing trend in the geographical origins of undergraduate students in agriculture. By 1973, two-thirds of the students were from urban and suburban backgrounds, instead of the traditional rural areas.

While 63 per cent of the upperclass students in 1973 were from urban areas, over 70 per cent of the incoming freshmen were from non-rural homes. The survey indicated that further changes could be expected in this direction.

Undergraduate enrollment in the College of Agriculture rose 184 per cent from 1970 to 1976. This past college term there were 3,650 undergraduates and 440 graduate students, making Penn State's agricultural enrollment the fifth largest in the nation.

The American Presidency is firmly rooted in agriculture through the farm ties of over half the men who have held that office. From the first, George Washington, to the 39th, Jimmy Carter, 23 U.S. Presidents were raised on, owned or ran farms.

In 1976, American dairy cows produced enough milk to form a river that would measure 2,904 miles long, 41 feet wide and three-and-a-half feet deep. It would stretch from Boston to San Francisco. If put in gallon cartons and placed side by side, the 120 billion pounds of milk produced would form a band around the world 85 times at the equator.

The most prolific dairy stud bull in the country, Paclamar Astronaut, has sired over 100,000 offspring. He is estimated to have a female descendant in one of every three dairy herds in the U.S. These cows produce more than 600 million quarts of milk in one year, enough to supply every American with three glasses of milk a day for a full year.

HAT & GAVEL AUCTION CO.

1 Mile North of Lititz on Route 501

THURSDAY EVENING, JUNE 9, 1977 5:30 P.M.
