

WHAT'S NEW

REVO COUNTER

Known as the "SAM" Revo Counter, this device attached to a wheel hub can be used by farmers, contractors or home owners to keep track of tractor, truck or wheeled implement usage. It's now available from Massey-Ferguson as an aid in determining daily field operation, acres covered, fuel economy versus work performed, rate of seed, fertilizer or herbicide application, yield per acre, and maintenance scheduling. SAM revo counter comes with slide rule for direct conversion of wheel revolutions into square feet, acres or miles, or metric measurements.

STATIONARY CONVEYOR

A new stationary conveyor box that smoothly synchronizes forage hauling with the unloading operation is being introduced by the Koehring Farm Equipment Division.

The new Fox 1016 stationary conveyor acts as a connecting link in the forage handling system receiving an entire load of hay or corn silage at a time and then feeding it at a uniform rate into the blower. Because the hauler spends less time unloading, he is able to haul more loads in a day. As a result, Fox engineers explain, farmers and ranchers may find that they will need fewer forage wagons or trucks for hauling.

The large capacity Fox 1016 Stationary Conveyor Box is ideal for the farmer or rancher who hauls silage or hay silage long distances. With the Fox 1016, forage wagons and trucks spend less time unloading and more time hauling.

It has four heavy-duty apron chains with a two speed apron transmission which moves material forward to the beaters and then can be shifted down to a slower speed to properly feed ensilage into the forage blower. With the hydraulic flow-control valve, the conveyor has an infinite number of speeds to properly meter the ensilage into the forage blower.

Pintle chains are used throughout with heavy worm drive for minimum maintenance, says Fox. The conveyor is designed to be driven with tractor hydraulics.

The operator can bring the entire operation to a halt by pulling the safety rope which runs around three sides of the box.

The two wheel axle and the tongue design make it easy to handle when moving, says Fox.

The Koehring Farm Equipment Division, headquartered in Appleton, Wis., is a major manufacturer of farm implements including forage harvesting and handling equipment and tillage tools.

PAFC cites Robinson

Don Robinson

CARLISLE — Donald M. Robinson, adult farmer instructor in the Eastern Lancaster County School District, was honored recently by the Pennsylvania Association of Farmer Cooperatives for his educational contributions to cooperative business.

Mrs. Robinson received a digital clock at a special awards luncheon held here in Carlisle.

According to Harold F. Doran, cooperative business education coordinator at The Pennsylvania State University, he was cited for innovative teaching concepts on the effective use of farmer cooperatives.

He also is author of a new teacher's guide for a high school course, "Cooperatives—Serving Our Community."

Mr. Robinson has been a vocational agriculture instructor in the Eastern Lancaster County School District the past seven years.

you

power

ON ALL FOUR WHEELS

Four-wheel drive lets you work wet fields where two-wheel tractors can't go. You get extra traction—up to 49% more driving-wheel contact. Less rear wheel slippage. Extra flotation. The Deutz air-cooled diesel engine is famous for fuel savings. Four-wheel drive gives you even greater savings. Ask for a field demonstration and see why you should switch to one.

DUAL SPEED PTO AVAILABLE.
