Berks County farmers

(Continued from Page 107) the ground will be more even because the cultivator won't leave a ridge.

They have been planting corn with a six row plateless planter since they started minimum tillage in 1973. Before 1973 the Hix's moldboarded all of their corn fields and used a four row planter with wide rows.

They strive for plant populations of between 20 to 21,000 plants per acre except for their silage corn. Here they plant 24,000 seeds per acre to hopefully achieve a plant population of 22,000.

Lesher explained that approximately half of the 425 acres of corn they produce is no-tilled while the remainder is chiseled. No-till planting has saved them time, but not too much in production costs. This was primarily attributed to the heavier use of herbicides. The Leshers have not increased the amount of spray on their minimum tilled ground however, noting no significant difference from conventionally plowed soil.

When planting no-till, Lesher increases his seeding rate to about 23,000 seeds per acre and has found that last year the no-tilled corn yielded better than the rest of his corn.

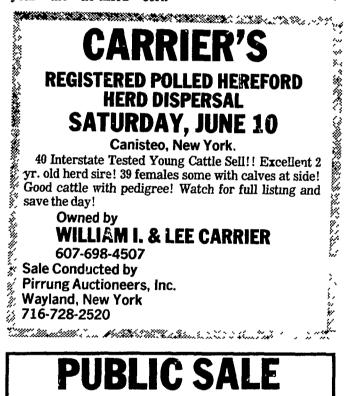

Gelsinger explained that they try to plant 20,500 seeds per acre to achieve a plant population of 18,500 to 19,000.

They have also switched from a four row planter to a 30 inch no-till six row planter. They follow the chisel plow with a field cultivator before planting. Gelsinger remarked that they have gone to larger equipment, using a fourwheel drive tractor for the first time this year.

All of the interviewed farmers have used insecticides during the past few years. "Ten years ago, I didn't use them" stated Kopfer. John Hix remarked that he believes that the corn comes up quicker when insecticides are applied.

Gelsinger has used insecticides for the past three years but planted without them this year because of the economics and availability," he explained. "Instead I'm putting the money towards more fertilizer," he said.

Gelsinger incorporates liquid nitrogen as close to planting time as possible to reduce the loss, followed by

about 250 pounds of row fertilizer when planting. ~ ~ ~

John Hix stated that he thinks incorporation of herbicides has been "the best thing ever." John had entered corn production contests last year using his ordinary planting procedures and was first in Berks County and second in the state in the five acre contest.

In the 25 acre contest he was placed third nationally in the class 1 non-irrigated division. The corn was planted in a four year old alfalfa field.

Leshers plow down fertilizer which is custom applicated in the Spring and followed up with 150 pounds of row fertilizer. Preemergance spray is used on all their corn except that which was no-tilled.

Kopfer explained that he takes complete soil tests every year for every field and applies the individual ingredients to each field's needs, instead of using a premixed blend. But regardless, 130 units of nitrogen are plowed down in each field. For row fertilizer Kopfer has switched from a blend of 8-32-16 to a blend of 13-52-0, to better accomodate his practices.

"I change my herbicide program a little each year," Kopfer mentioned. He goes heavier on the herbicides because of the extra mulch on the surface. Gelsinger also noted that he applies herbicides on the heavy limits which are recommended.

Larger equipment has taken the place of smaller machines in most instances. Larger tractors are especially needed for pulling chisel plows and off-set discs. Kopfer has gone from an 80 horse power tractor to 105 horsepower model equipped with dual wheels. Duals have become very important in reducing slippage and vibration.

Rae Hix is sold on tractor cabs, because they make field work more tolerable. This year his sons didri't want to start planting corn as early as Rae would have liked because it was too cold. "But," said Hix, "next year we may have a cab on the planting tractor so they will plant anyway."

PUBLIC AUCTION OF ANTIQUES, HOUSEHOLD GOODS, BUTCHER EQUIPMENT, TRUCK ON SATURDAY, JUNE 3 At 9:00 A.M.

Located at R.D. #2, Annville in E. Hanover Twp., 1 mile east of Indiantown Gap, midway between Harpers & Ono Diner, ½ mile north of Allentown Blvd. (known as Route 22). Take either Reeds Creek Rd. or Sealer Creek Rd. north off Allentown Blvd. to sale site.
