Original Flex-Auger® System

Capable of delivering up to 2400 pounds of feed per hour (with very low horsepower requirements), Chore-Time's original Flex-Auger® is still today's most efficient system for conveying feed. The one continuous piece, spring type auger, moves feed up, down, on-the-level or around corners ... without gears, connections or pins. Feed is delivered fresh, dry and clean in a rodent proof, completely closed delivery tube. Requiring no floor space, the ceiling suspended system is never in the way of machinery or animals. It is the one system that is all three ... adaptable, versatile and efficient.

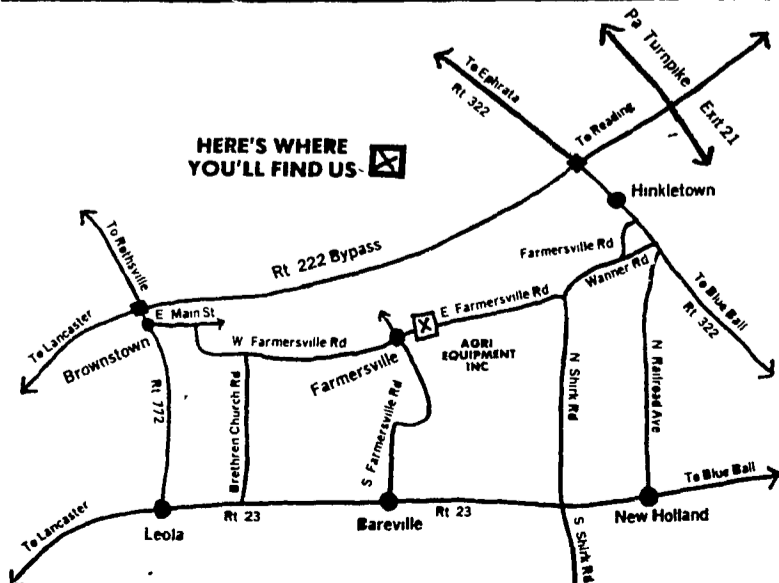

"Hi-C" Flex-Auger® System

Containing all the features of "the original Flex-Auger" system," the "Hi-C" Flex-Auger® delivers increased quantities of feed equally well to broiler, layer, turkey, swine, or cattle operations. With a capacity of roughly three times that of the standard Flex-Auger® (this unique system is capable of moving three tons of feed per hour), feed is moved completely enclosed from bin to animals.

Feed drops with or without manual shutoff feature can be located at desired intervals along the line. Single and Y outlet drop assemblies are available to deliver feed efficiently from main line to individual feeders through three inch plastic drop tubes.
