

Project Clearwater

(Continued from Page 96) cluding the construction of watering facilities. Strip cropping was introduced and a permanent wildlife habitat was established. In addition,

the 85 wooded acres were cleaned up.

The equipment involved in the immense project included more than 150 tractors, 110 farm wagons,

and a variety of other implements such as forage harvesters, discs and plows. Construction equipment and a well driller were also involved.

Included in the materials inventory were some 600 fence posts, 18 rolls of

barbed wire, 350 tons of crushed stone, 30 tons of fertilizer, 200 tons of lime, 360 pounds of alfalfa, 3000 feet of woven wire, 60 cubic yards of concrete, and much more.

(Turn to Page 104)

A new hog barn was being constructed as bulldozers dug a pond and thousands of visitors toured the area in wagons.

This arrangement of railroad ties sloping down to a small stream is designed to keep cattle from polluting the water.

BOU-MATIC MILKING SYSTEMS

BOU-MATIC PIPELINES— The milking system with dairy proven features that all add up to a better way to milk.

See us today for more on these or many others.
