

HILLSIDE POULTRY FARM is ready for Mix-Mill.* Are you?

Glenn, Ronald, and Clifford Gayman can show you this modern feed processing operation and answer many of your questions.
Plan to visit them during the

OPEN HOUSE

September 13, 1978-10 a.m. to 4 p.m.

R.D. 11, North Franklin Street Extended
Chambersburg, Pa.

Your plan for growth is a more important factor than the size of your farm in determining whether or not you need a Mix Mill.

On-the-farm feed processing could be profitable for you ... RIGHT NOW!

Glenn Gayman and his sons have farmed the land and operated the poultry business at the Open House site since 1932. As the complex expands, ways must be found to cut overhead. For the Gaymans, a Mix Mill on-the-farm feed factory seemed a likely place to save both time and money.

The Gaymans have looked at feed factory set-ups at farm shows and were contemplating a grain storage facility, but the serious planning was engineered by a knowledgeable Tam-Agri salesperson who devised such "extras" as the specially constructed oyster shell bin (pictured left) and showed the Gaymans how a larger elevator leg now would save money in future expansion. With an eye on the agri-businessman's budget, Tam-Agri utilized bins already on the farm and even suggested that the "U"-trough be placed under roof so unloading in bad weather would be easier.

The result, according to Ronald Gayman "Less time is spent mixing and grinding the grain than was previously spent buying and transporting it. Then, too, the quality of the mix and special ingredients can be effectively controlled when we make our own feed."

From Ronald (pictured here) "Every operation is different. For us, good quality ingredients bought at favorable market prices and stored for the future are the key to savings."

Ron is please with the system recently installed by Tam-Agri Corporation. "My biggest concern was uninterrupted egg production. Production has held steady since the Mix Mill feed factory is operating, and we foresee no problems."

This system was designed, supplied and constructed by:
