When you treat bloody scours (swine dysentery), you're only fighting part of the problem

Bloody scours is a cyclic disease. Treatment with Lincomix® (lincomycin) will disrupt the cycle and bring it under control. But once treatment stops, bloody scours can, and often does, break out again - even among animals you thought had recovered.

Protect against bloody scours all the way to market with Lincomix.

For effective control of bloody scours all the way to market, start your herd on Lincomix at the first signs of the disease. The treatment level is 100 grams of lincomycin per ton of feed. After three weeks at this level, or following disappearance of symptoms, continue medication at 40 grams lincomycin per ton of feed up to six days before slaughter.

And on those farms with a history of bloody scours, feed 40 grams lincomycin per ton of feed to keep outbreaks from recurring, even though symptoms are not apparent.

See us today. Lincomix belongs in your hog rations!

Lincomix—THE HEAVYWEIGHT feed additive for the treatment and control of bloody scours from start to finish.

Look for lincomycin on the feed tag at the following dealers:
