

WHAT'S NEW

NEST SYSTEM
HUMBOLDT, Kans. - A new plastic nest system has been introduced to the poultry breeding industry by a new Kansas manufacturer. Cripps Automatic Rear Rollout Systems, built by Charles Cripps Company, are fabricated from ABS plastic, bringing the breeder several measureable advantages over conventional galvanized steel nests, ac-

ording to Charles Cripps, president.

Durability, sanitation, convenience, and economy are the specific benefits the manufacturer claims for the new concept in nests. ABS plastic is impervious to acids such as chicken droppings; to alkalis which normally are applied by pressure hose for cleaning; and is highly resistant to deterioration from ultra-violet light. In

addition, Cripps nest units are light in weight. A 10-nest, 2-story standard industry size unit weighs only 31 pounds.

Nest bottoms snap into place, tilted to the rear with a gentle slope that moves each newly laid egg directly into a covered egg tray to stay clean - a condition vital to promote hatchability, says the manufacturer. Egg holding trays are covered with a hinged lid that is fitted for automatic lock-open and quick-release, permitting one-hand egg gathering. Breeders who participated in testing the new system report a labor saving of up to 50 per cent overall, both gathering time and upkeep.

For breeders who want to salvage frames of their worn-out galvanized nests, Cripps also produces con-

version kits and replacement nest bottoms.

Cripps Automatic Rear Rollout Nest Systems are sold only from the factory in Humboldt, Kans. For

descriptive literature, prices, order form, or other information, write Charles

Cripps Company, Box 212, Humboldt, Kans. 66748, or call (316) 473-2715.

BAR-LOK CORN CRIBS!

THE ADVANTAGES OF SPEEDY CORN CRIBS

1 Easy to Erect
 Speedy's Corn Crib goes up fast and easy because of roof rafters and Bar Lok side panels. The steeply pitched roof pushes the corn to the edges - NO WASTED SPACE!

Step 1 Bar Lok Construction saves you time - gives you a strong sturdy crib. Crib wire panels are interlaced to form an eye. A 1 1/2 x 3/8 rod is then inserted through the eye and pushed down to the foundation. Easy simple fast construction.

Step 2 Rafters are bolted to assembled rafter ring. Now you're ready to put the roof panels on. Rafters assure you of proper roof panel placement the first time. No wooden framework to build.

2 Wide Selection
 There is a Speedy Crib for every farm need - priced right for every budget.
 • Choice of 900, 1200 or 1700 Bushel Sizes
 • 5 or 2 Gauge Wire Mesh Side Panels

3 Durable
 The Speedy 5 Gauge Crib won't bulge or sag - stands straight and tall year after year. For extra strength and durability get the Speedy 2 Gauge Crib - outlasts other cribs - even with full capacity loads. Galvanized wire - not aluminum paint!

4 Save Money and Energy
 Corn in a Speedy Crib is dried by Mother Nature without the use of costly energy. This saves money and also helps conserve our scarce energy resource.
