Daryl Schafer

his older sheep he said. The ewe lambs are pampered a little more and get the alfalfa hay.

A separate lambing pen is one of the features in Daryl's barn. Boards block the drafts and good dry bedding is abundant. The flock is raised basically in confinement, getting their exercise in a small lot behind the barn.

The FFA shepherd finds there are a few problems with the confinement situation. With the sheep being able to run in a small pasture, parasites are a bigger problem. He worms his lambs at 30 pounds and the ewes about every month.

"Another problem with the confinement is that I have to supplement the pasture with hay. That lowers their efficiency because I'm using a lot more expensive feed than I should be using."

"I may expand my flock this year and experiment with it" he said.

"I'll probably have to sell most of my grade flock while I'm in college". Daryl plans on studying agricultural education at Penn State.

Besides sheep raising, Daryl has worked on the Newton Evan's Farm, Chester Springs for his work experience project. There he gained experience with dairy beef and crop farming.

Daryl is now president on

HARTFORD, Conn. - The National DHIA 1979 Convention will be held March 19 to 22, 1979 in the Sheraton Hotel, Hartford, Connec-

the chapter's parliamentary procedures team. Last year the team took first place honors in the County. He was a delegate to the state FFA convention for two years, participating on the awards and contest committee and the state nominating committee. "This year I'm going for a state office in FFA. I was sent out to observe the 51st national FFA convention in Kansas City, Mo. this past Fall" he added.

Among his many awards,

ticut. Leaders in New England and New Jersey are doing everything possible to ensure a successful meeting.

The state DHIA's and Exten-

Daryl has recently added the Keystone Farmer degree to his list. He also received two blue ribbons for his project books this past year. The public speaking and sheep production Foundation Medals are also on his list of achievements.

"I think FFA showed me what efficiency really meant and how I could rearrange my program to be more efficient. I think FFA does that with any program it offers."

sion leaders in Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, and Vermont have planned an exciting program of business and tours so there will be something for

Nat. DHIA to meet

everyone.

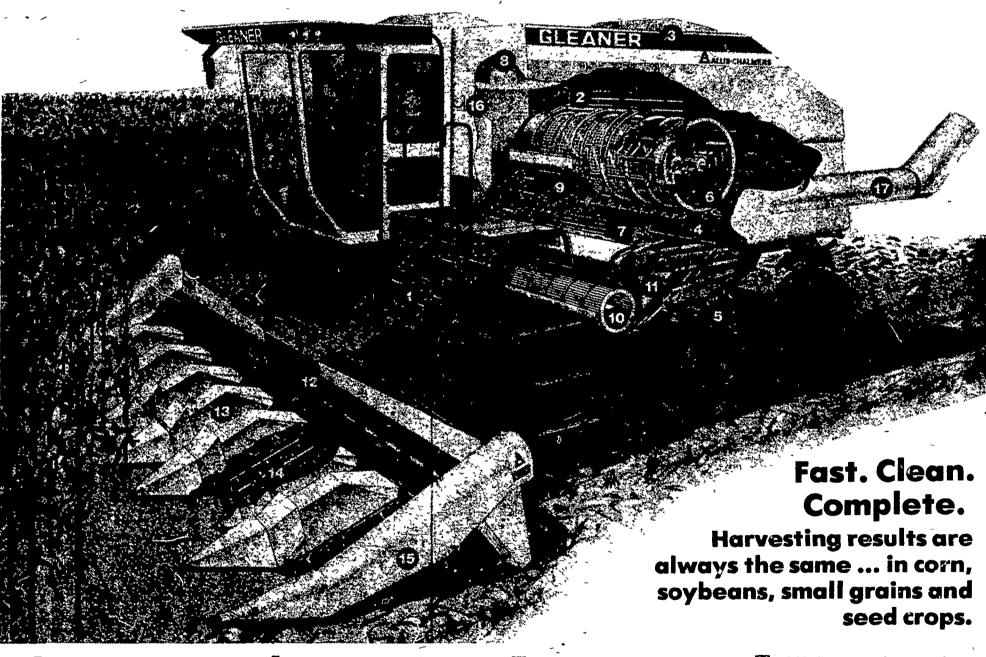

In the general session the National DHIA Outlook Committee will present plans for a revitalized Na-

tional Cooperative Dairy
Herd Improvement Program to be discussed and
considered by delegates.
First presented at the 1978
Annual Meeting, the outlook
recommendation for the
future growth and development of National DHIA now
will be acted upon by the
delegate body.

As usual, the serious business of determining dairy herd improvement policy will be the order of the day but the traditional fun and games again will be part of the show. Over 400 dairy farmers, their wives, Extension people, and other dairy industry leaders are expected to attend.

A ALLIS-CHALMERS NEW N5 & N6 GLEANER COMBINES JOIN THE LONG LINE OF LEADERSHIP

- Sure-feed system.—Center-pivot system keeps crop at a constant angle right into the cylinder.
- Exclusive cage sweep.—Oscillating action keeps top of cage free of straw build-up
- 245 bu. bin on N6.—World's largest. Center-mounted for maximum stability N5—200 bushels.
- Distribution augers.—Provides uniform delivery of material, after separation, to accelerator rolls
- Tailing auger.—Tailings are returned to the accelerator rolls for recleaning
- 360° separating action.—Entire cage is perforated so separation occurs around its full circumference 5,749 sq. inches of separating area.
- Accelerator rolls.—N-Series exclusive, they propell grain at high speed through high-velocity air blast for maximum cleaning and better sidehill operation.
- Clean grain elevator.—Moves grain at up to 50 bu /min
- Concave door stone protection.—
 Automatically ejects rocks and other damaging objects before they can enter the cylinder
- fan.—Two outlets provide air for preclean and finish cleaning at shoe, cabcontrolled velocity.
- 11 2-stage high-velocity air cleaning.— Handles most of the cleaning before crop reaches shoe area, eliminates cleaning backups Adjustable chaffer and sieve for final cleaning
- 12 14-inch auger.—Maintains a steady, even crop flow for high-speed, multirow harvesting
- Sloped gather sheets.—Minimize hair pinning and reduce whipping of down-
- 14 Individually mounted row units.— Units feature extra-long gathering chain lugs for positive feeding.
- Extra-low profile dividers.—Gently skim under down and tangled crop
- 16 150 gal. fuel tank.—Biggest anywhere for more harvesting time between fuel
- Pushbutton activated, swivel unloading tube.—Unloads the entire 245 bu load in less than 2 min. Less than 1 5 min. on the N5
