VAN DALE®

LIQUID MANURE TANK & SOIL INJECTOR

Liquid Manure Injector System
Optional accessory that helps keep down odors and minimize runoff. Master hose has 4" diameter; feeds liquid manure into 4" square, enclosed tool bar. From there, three feeder hoses connect to spring loaded knives that open up soil for injection. Adjustable width spacing permits use on sod, row crop and stubble fields. Available for both slinger and vacuum type units.

- Soil Injector Purchased
With Tank **SAVE \$\$\$**

Go with the big performers in your beef or dairy operation VAN DALE Liquid Manure Spreaders. Choose a big capacity tank that can handle your year-in, year-out manure disposal problem. Liquid Manure is the non-messy, profitable way to go. You're putting manure right onto the ground where it goes to work faster and does the most good. And liquid manure contains more nutrient value than dry, making its use even more beneficial. Considerable savings in commercial fertilizer purchases can often be realized. You can now manage your assets to your advantage. The VAN DALE Slinger is built rugged so you can spread when time and weather are right.

The low, straight-back spread pattern does not blow manure all over the operator and equipment, still covers up to a 40' wide swath. And you don't have to drive over ground already spread. A large fill hole provides easy access. Heavy, reinforced oval tank with full length beam supports and a new, extra tough walking beam undercarriage gives maximum stability and easy maneuvering. Combine the Slinger with a VAN DALE Agitator/Filler Pump and a VAN DALE Above Ground Storage Tank. You'll have a rugged manure system that will return dividends in labor and time saved for many, many years.

Inside, VAN DALE Slingers have a full length powerful 7" Auger that turns at 540 RPM to charge the impeller for more throw power. Especially important when using an injector to assure constant flow from start to finish. Keeps slurry constantly agitated. You spread an even, consistent blanket of liquid manure. It's an exclusive, standard feature on all three VAN DALE Slinger models.

THE ALL NEW

VAN DALE®

HIGH PRESSURE CENTRIFUGAL PUMP

Meet the latest addition to the VAN DALE line of liquid manure handling products. It's the new VAN DALE high pressure centrifugal pump. This pump is specifically designed to get at those really hard to reach spots in livestock manure systems. You know ... those narrow, lowdown pit openings that make it a real problem to agitate manure. The VAN DALE centrifugal pump will reach most of 'em ... and deliver plenty of rugged power to get the job done right. Manure is brought into the impeller housing through a 6" suction hose, discharges back into the pit through a 4" flexible hose. The pump will develop up to 70 p.s.i. pressure to help break solid deposits for easier loading. The pump will agitate, transfer or load manure at a rate of up to 2,500 gallons per minute. Look into the benefits of the VAN DALE high pressure centrifugal pump today. It could be just the problem solver you are looking for.
