

young's Rabon fly control program runs itself.

Horn Fly

Face Fly

**Let your cattle control
profit-robbing flies.**

Feeding Rabon® Oral Larvicide turns your herd into an effective fly control army that kills face flies, horn flies, stable flies and house flies before they take wing. ROL passes through cattle to activate their manure — destroying all four flies' larvae before they rob you of profits. It is approved for lactating dairy cattle. Flies are more than a nuisance. They spread disease and reduce milk production.

The time to start your ROL fly control program is this spring with all summer follow through.

Always follow label directions.

Housefly

Stable Fly

**Try Rabon now
and flies won't
get off the ground.**
