Only Banvel® herbicide offers so many ways to control weeds.

You can use Banvel herbicide at more different times in the corn production cycle than many other herbicides

Pre-emergence Tank-mixed with *Lasso* to control both grasses and broadleaf weeds

Early layby In corn up to 5 inches Banvel as an overlay at a one pint rate gets early and late weeds

Post-emergence In corn up to 36 inches, Banvel gets rid of many tough-to-kill weeds that 2,4-D misses and of course the easy weeds too

****Fall treatment** Air application knocks down hemp dogbane permitting easier harvest

Tough-to-get weeds On the Banvel label, note the stubborn species that Banvel controls

Rescue When weeds threaten a takeover (you couldn't get into the field earlier) Banvel can help save your crop

Come see us now for your supply of Banvel herbicide the Big Plus from Velsicol

- ★ Toxaphene 6E

FOR NO-TILL for early post-emergence

Banvel® + atrazine

herbicide tank-mix combination kills young, tough broadleaves, vines, before they damage your corn.

Banvel + atrazine together do a broad spectrum job on weeds resistant to 2,4-D and not controlled by atrazine alone including tough-to-control foxtails, Canada thistle, cocklebur, smartweed, velvetleaf and others.

Spray up to 3 weeks after planting when grasses are less than 1-1/2 inches tall. When Banvel® + atrazine is applied according to label instruction, control usually lasts until corn is big enough to shade out late-germinating weeds.

Order Banvel Herbicide plus atrazine today as an important step toward total farm weed control.

NOTE: Before using any pesticide, read the label.

MATERIALS:

- Granular 20% Super Phosphate
- Borate
- Potash
- Urea
- Zinc
- 4-44-0 Micronutrient Mix
- K-Mag
- DAP
